*normally do not disturb. The adjustment to align the AE SPD requires the Multiple Tool.

**normally do not disturb. Canon recommends using only adjustment C to match the 2nd-curtain travel time to the 1st-curtain travel time. If the 1st-curtain travel time is out of tolerance, Canon suggests replacing the shutter block.

***do not disturb—the adjustments for the main-mirror 45° angle and the submirror 35° angle require special Canon tools. The factory first adjusts the main-mirror sub-stopper adjustment and then the main-mirror

main-stopper adjustment. Next the factory adjusts the submirror sub-stopper adjustment and then the submirror main-stopper adjustment. Adjusting the sub-stopper adjustments first minimizes mirror bounce.

All circuit adjustments require the Canon Multiple Tool.

Note: When you're checking shutter speeds, you may find that the shutter delivers only 1/8000 second with the back cover open—regardless of the shutter-speed setting. In that case, the owner has set custom function F-2 to 1 (rewind function that leaves the leader extending from the cartridge).

Change the custom function F-2 to the standard 0 for checking shutter speeds (see, *Operating Instructions*).
