Cilia and Nervous System Development and Function Kerry L. Tucker, Tamara Caspary, 2013-01-19 Cilia are tiny microtubule based organelles projecting from the plasma membrane of practically all cells in the body In the past 10 years a flurry of research has indicated a crucial role of this long neglected organelle in the development and function of the central nervous system A common theme of these studies is the critical dependency of signal transduction of the Sonic hedgehog and more recently Wnt signaling pathways upon cilia to regulate fate decisions and morphogenesis Both primary and motile cilia also play crucial roles in the function of the nervous system including the primary processing of sensory information the control of body mass and higher functions such as behavior and cognition serving as antennae for neurons to sense and process their environment In this book we describe the structure and function of cilia and the various tissues throughout the brain and spinal cord that are dependent upon cilia for their proper development and function *Cell Communication and Signaling in Health and Disease*, 2024-11-06 Cell communication and signaling are essential functions for life The topic encompasses all basic and translational aspects of cellular communication and signaling pathways in normal and pathological conditions Many diseases are the result of dysfunction in cell communication and signaling This book presents contributions ranging from studies of sensory transduction membrane receptors ion channels protein modification cell transformation receptor internalization and trafficking to disease oriented studies focusing on neurodegenerative diseases or cancer As such the book will provide a gateway for newly interested investigators and serve as a resource for seasoned researchers of cell biological phenomena in health and disease Targeted at students and researchers in biological medical and chemical disciplines this book will provide an overview of the work that is being done on this cell biology topic The book highlights any gaps and areas that would benefit from further exploration pertaining to both intracellular and intercellular cell communication and signaling In addition the book will contribute to the training of current and future cell biologists

Structure and Evolution of Invertebrate Nervous Systems Andreas Schmidt-Rhaesa, Steffen Harzsch, Günter Purschke, 2015-12-17 The nervous system is particularly fascinating for many biologists because it controls animal characteristics such as movement behavior and coordinated thinking Invertebrate neurobiology has traditionally been studied in specific model organisms whilst knowledge of the broad diversity of nervous system architecture and its evolution among metazoan animals has received less attention This is the first major reference work in the field for 50 years bringing together many leading evolutionary neurobiologists to review the most recent research on the structure of invertebrate nervous systems and provide a comprehensive and authoritative overview for a new generation of researchers Presented in full colour throughout *Structure and Evolution of Invertebrate Nervous Systems* synthesizes and illustrates the numerous new findings that have been made possible with light and electron microscopy These include the recent introduction of new

molecular and optical techniques such as immunohistochemical staining of neuron specific antigens and fluorescence in situ hybridization combined with visualization by confocal laser scanning microscopy New approaches to analysing the structure of the nervous system are also included such as micro computational tomography cryo soft X ray tomography and various 3 D visualization techniques The book follows a systematic and phylogenetic structure covering a broad range of taxa interspersed with chapters focusing on selected topics in nervous system functioning which are presented as research highlights and perspectives This comprehensive reference work will be an essential companion for graduate students and researchers alike in the fields of metazoan neurobiology morphology zoology phylogeny and evolution
