Conformally Invariant Processes In The Plane Mathematical Surveys And Monographs:

Conformally Invariant Processes in the Plane Gregory F. Lawler, 2005 Theoretical physicists have predicted that the scaling limits of many two dimensional lattice models in statistical physics are in some sense conformally invariant This belief has allowed physicists to predict many quantities for these critical systems The nature of these scaling limits has recently been described precisely by using one well known tool Brownian motion and a new construction the Schramm Loewner evolution SLE This book is an introduction to the conformally invariant processes that appear as scaling limits The following topics are covered stochastic integration complex Brownian motion and measures derived from Brownian motion conformal mappings and univalent functions the Loewner differential equation and Loewner chains the Schramm Loewner evolution SLE which is a Loewner chain with a Brownian motion input and applications to intersection exponents for Brownian motion The prerequisites are first year graduate courses in real analysis complex analysis and probability The book is suitable for graduate students and research mathematicians interested in random processes and their applications in theoretical physics

Conformally Invariant Processes in the Plane Gregory F. Lawler, 2008 Presents an introduction to the conformally invariant processes that appear as scaling limits This book covers such topics as stochastic integration and complex Brownian motion and measures derived from Brownian motion It is suitable for those interested in random processes and their applications in theoretical physics

A Mathematical Introduction to Conformal Field Theory Martin Schottenloher, 2008-09-11 The first part of this book gives a self contained and mathematically rigorous exposition of classical conformal symmetry in n dimensions and its quantization in two dimensions The second part surveys some more advanced topics of conformal field theory

Einstein, 1905-2005 Thibault Damour, Olivier Darrigol, Vincent Rivasseau, 2006-04-18 This book is the fourth in a series of lectures of the S eminaire Poincar e which is directed towards a large audience of physicists and of mathematicians The goal of this seminar is to provide up to date information about general topics of great interest in physics Both the theoretical and experimental aspects are covered with some historical background Inspired by the Bourbaki seminar in mathematics in its organization hence nicknamed Bourbaphi the Poincar e Seminar is held twice a year at the Institut Henri Poincar e in Paris with contributions prepared in advance Particular care is devoted to the pedagogical nature of the presentations so as to fulfill the goal of being readable by a large audience of scientists This volume contains the seventh such Seminar held in 2005 It is devoted to Einstein s 1905 papers and their legacy After a presentation of Einstein s ep temological approach to physics and the genesis of special relativity a cen nary perspective is o ered The geometry of relativistic spacetime is explained in detail Single photon experiments are presented as a spectacular realization of Einstein s light quanta hypothesis A previously unpublished lecture by Einstein which presents an illuminating point of view on statistical physics in 1910 at the dawn of quantum mechanics is reproduced The volume ends with an essay on the historical physical and mathematical aspects of Brownian motion We hope that the publication of this

series will serve the community of physicists and mathematicians at the graduate student or professional level

Probability, Geometry and Integrable Systems Mark Pinsky, Bjorn Birnir, 2008-03-17 Reflects the range of mathematical interests of Henry McKean to whom it is dedicated

Conformal Maps And Geometry Dmitry Beliaev, 2019-11-19 I very much enjoyed reading this book Each chapter comes with well thought out exercises solutions to which are given at the end of the chapter Conformal Maps and Geometry presents key topics in geometric function theory and the theory of univalent functions and also prepares the reader to progress to study the SLE It succeeds admirably on both counts MathSciNet Geometric function theory is one of the most interesting parts of complex analysis an area that has become increasingly relevant as a key feature in the theory of Schramm Loewner evolution Though Riemann mapping theorem is frequently explored there are few texts that discuss general theory of univalent maps conformal invariants and Loewner evolution This textbook provides an accessible foundation of the theory of conformal maps and their connections with geometry It offers a unique view of the field as it is one of the first to discuss general theory of univalent maps at a graduate level while introducing more complex theories of conformal invariants and extremal lengths Conformal Maps and Geometry is an ideal resource for graduate courses in Complex Analysis or as an analytic prerequisite to study the theory of Schramm Loewner evolution

Advances in Disordered Systems, Random Processes and Some Applications Pierluigi Contucci, Cristian Giardinà, 2016-12-15 This book offers a unified perspective on the study of complex systems for scholars of various disciplines including mathematics physics computer science biology economics and social science The contributions written by leading scientists cover a broad set of topics including new approaches to data science the connection between scaling limits and conformal field theories and new ideas on the Legendre duality approach in statistical mechanics of disordered systems The volume moreover explores results on extreme values of correlated random variables and their connection with the Riemann zeta functions the relation between diffusion phenomena and complex systems and the Brownian web which appears as the universal scaling limit of several probabilistic models Written for researchers from a broad range of scientific fields this text examines a selection of recent developments in complex systems from a rigorous perspective

Spectral Theory and Differential Equations E. Khruslov, L. Pastur, D. Shepelsky, 2014-09-26 This volume is dedicated to V A Marchenko on the occasion of his 90th birthday It contains refereed original papers and survey articles written by his colleagues and former students of international stature and focuses on the areas to which he made important contributions spectral theory of differential and difference operators and related topics of mathematical physics including inverse problems of spectral theory homogenization theory and the theory of integrable systems The papers in the volume provide a comprehensive account of many of the most significant recent developments in that broad spectrum of areas
