Backman**

Clinical Management Memory Problems 2nd:

Clinical Management of Memory Problems (2nd Edn) (PLE: Memory) Barbara Wilson, Nick Moffat, 2014-05-09

Many patients with stroke head injuries or dementia suffer severe memory impairment and in many cases improvement may fail to occur. This book first published in 1984 followed by this second edition in 1992 offers practical guidelines to the problems and is supported by a discussion of theory about memory systems and functioning. It should enable therapists and psychologists to recognize, understand, assess and manage memory problems arising from injury, accident or infection of the brain. The authors are well known for their interest in memory and memory therapy. Topics covered in this text include the relationship between memory and practice, assessment methods for improving memory, organization of memory therapy, selection of appropriate treatments for individual patients, role of the microcomputer in memory rehabilitation, use of drugs in stimulating memory, development of programmes to improve attention and the treatment of the memory impaired in groups. This second edition has an update on drugs, electronic aids and assessment procedures with further evidence of the effectiveness of memory therapy. This book would have been an asset for those professionals involved in the rehabilitation of the impaired memory at the time and can still be of value today.

Clinical Management of Memory Problems Nick

Moffat, Barbara A. Wilson, 2013-11-11 *The Assessment, Evaluation and Rehabilitation of Everyday Memory Problems*

Barbara A. Wilson, 2013-11-07 In the World Library of Psychologists series, international experts present career-long collections of what they judge to be their finest work: extracts from books, key articles, salient research findings and their major theoretical and practical contributions. This volume of self-selected papers recognises Professor Barbara A. Wilson's major contribution to the study of neuropsychology. Published over a 25-year period, the papers included here address the assessment, treatment and evaluation of rehabilitation provided to people who have memory difficulties arising from an injury or illness affecting the brain. This selection of papers includes work on errorless learning, the natural history of the development of compensatory memory systems, paging systems developed to enhance independent daily living for memory-impaired people and single case experimental designs to appraise the response of individual patients. The final section includes a practical framework for understanding compensatory behaviour, a model of cognitive rehabilitation and a discussion of the dilemmas created by the different aims of neuroscience as opposed to those of clinicians. This book will be of great interest to clinical psychologists, neuropsychologists, occupational therapists and speech and language therapists, along with anyone who is interested in reducing the impact of memory problems on people who have suffered brain injury.

Cognitive-Communication Disorders of MCI and Dementia Kathryn Bayles, Kimberly McCullough, Cheryl K.

Tomoeda, 2018-12-10 A Must Have Resource for Clinicians, Instructors and Students in Training. Compensating for Psychological Deficits and Declines Roger A. Dixon, Lars B. ckman, Lars

Backman,2013-06-17 The concept of compensation in psychology refers to processes through which a gap or mismatch between current accessible skills and environmental demands is reduced or closed These gaps can be principally the result of losses such as those associated with aging or interpersonal role changes injuries such as those that may occur to the neurological or sensory systems organic or functional diseases such as the dementias or schizophrenia and congenital deficits such as those apparent in autism or some learning disabilities Whether the demand skill gaps can be bridged completely reduced only moderately or are impossible to close depends on a variety of factors In every case however the guiding notions of compensation are that some such deficits may be amendable the continuation of the effects of the gap may be avoidable and some functioning may be recoverable In this sense compensation is related to adaptation it is about overcoming deficits managing the effects of losses and promoting improvement in psychological functioning Compensation is a concept that has a long and rich history in numerous domains of psychological research and practice To date however few of the relevant research domains have benefitted explicitly or optimally from considering alternative perspectives on the concept of compensation Although researchers and practitioners in several areas of psychology have actively pursued programs with compensation as a central concept communication across disciplinary divides has been lacking Comparing and contrasting the uses and implications of the concept across neighboring and even not so adjacent areas of psychology can promote advances in both theoretical and practical pursuits The goal of this book is to carry inchoate integrative efforts to a new level of clarity To this end the editors have recruited major authors from selected principal areas of research and practice in psychological compensation The authors review the current state of compensation scholarship in their domains of specialization State of the art reviews of this rapidly expanding area of scholarship are therefore collected under one cover for the first time In this way a wide variety of readers who might otherwise rarely cross professional paths with one another can quickly learn about alternative preferences agendas and methods as well as novel research results interpretations and practical applications Designed to contain broad deep and current perspectives on compensation this volume continues the processes of explicating the concept of compensation linking and distinguishing compensation from neighboring concepts describing the variety of compensatory mechanisms operating in a wide range of phenomena and illustrating how compensatory mechanisms can be harnessed or trained to manage losses or deficits and to promote gains or at least maintenance of functioning

Memory in Science for Society Robert Logie,Nelson Cowan,Susan Gathercole,Randall Engle,Zhisheng Wen,2023 Memory is essential for every day life The understanding and study of memory has continued to grow over the years thanks to well controlled laboratory studies and theory development However major challenges arise when attempting to apply theories of memory function to practical problems in society A theory might be robust in explaining experimental data but fail to capture all that is important when taken out of the lab The good news is that the application of memory in science to challenges in society is rapidly expanding and Memory in Science for Society bridges that gap Inspired

by the synergy between theory and application in memory research leading international researchers share their passion for combining memory in science with applications of that science to a wide range of challenges in society Chapters demonstrate how that scientific passion has addressed challenges in education life attainment second language learning remembering life events and faces of strangers future planning and decision making lifespan cognitive development and age related cognitive decline following instructions and assessment and rehabilitation of cognitive impairment following brain damage Written and edited by the leading researchers in the field the book will be an important and influential addition to the memory literature providing a new and comprehensive focus on the connection between theory and practice in memory and society

Neurological Rehabilitation Michael P. Barnes, David C. Good, 2013-01-10 Neurological Rehabilitation is the latest volume in the definitive Handbook of Clinical Neurology series It is the first time that this increasingly important subject has been included in the series and this reflects the growing interest and quality of scientific data on topics around neural recovery and the practical applications of new research The volume will appeal to clinicians from both neurological and rehabilitation backgrounds and contains topics of interest to all members of the multidisciplinary clinical team as well as the neuroscience community The volume is divided into five key sections The first is a summary of current research on neural repair recovery and plasticity The authors have kept the topics readable for a non scientific audience and focused on the aspects of basic neuroscience that should be most relevant to clinical practice The next section covers the basic principles of neurorehabilitation including excellent chapters on learning and skill acquisition outcome measurement and functional neuroimaging The key clinical section comes next and includes updates and reviews on the management of the main neurological disabling physical problems such as spasticity pain sexual functioning and dysphagia Cognitive emotional and behavioural problems are just as important and are covered in the next section with excellent chapters for example on memory and management of executive dysfunction The final part draws the sections on symptom management together by discussing the individual diseases that are most commonly seen in neurorehabilitation and providing an overview of the management of the disability associated with those disorders The volume is a definitive review of current neurorehabilitation practice and will be valuable to a wide range of clinicians and scientists working in this rapidly developing field A volume in the Handbook of Clinical Neurology series which has an unparalleled reputation as the world's most comprehensive source of information in neurology International list of contributors including the leading workers in the field Describes the advances which have occurred in clinical neurology and the neurosciences their impact on the understanding of neurological disorders and on patient care
