Deactivation And Regeneration Of Zeolite Catalysts Catalytic Science Imperial College Press:

Deactivation and Regeneration of Zeolite Catalysts, 2011 Deactivation and Regeneration of Zeolite Catalysts M. Guisnet, F. Ramôa Ribeiro, 2011 In chemical processes the progressive deactivation of solid catalysts is a major economic concern and mastering their stability has become as essential as controlling their activity and selectivity For these reasons there is a strong motivation to understand the mechanisms leading to any loss in activity and or selectivity and to find out the efficient preventive measures and regenerative solutions that open the way towards cheaper and cleaner processes This book covers in a comprehensive way both the fundamental and applied aspects of solid catalyst deactivation and encompasses the state of the art in the field of reactions catalyzed by zeolites This particular choice is justified by the widespread use of molecular sieves in refining petrochemicals and organic chemicals synthesis processes by the large variety in the nature of their active sites acid base acid base redox bifunctional and especially by their peculiar features in terms of crystallinity structural order and textural properties which make them ideal models for heterogeneous catalysis The aim of this book is to be a critical review in the field of zeolite deactivation and regeneration by collecting a series of contributions by experts in the field which describe the factors explain the techniques to study the causes and suggest methods to prevent or limit catalyst deactivation At the same time an anthology of commercial processes and exemplar cases provides the reader with theoretical insights and practical hints on the deactivation mechanisms and draws attention to the key role played by the loss of activity on process design and industrial practice Industrial Arene Chemistry Jacques Mortier, 2023-03-17 Industrial Arene Chemistry Explore the wide array of uses for aromatic hydrocarbons in this comprehensive reference Aromatics are a class of compounds normally but not exclusively organic which tend to be produced as by products of various industrial processes Their importance as petrochemical materials in themselves along with the range of inter relations between different aromatic chemicals creates a complex and opportunity filled market for aromatics Industrial Arene Chemistry provides a thorough look at the conventional techniques required to use and produce these aromatic hydrocarbons Beginning with an overview of the global aromatic market including but not limited to manufacturers markets of BTX and downstream functional aromatics aromatics derived from renewable sources and economic forecasts the book will also explore the impact shifting environmental factors will have on the future of aromatic chemistry The text further explores BTX production processes differentiated according to the raw materials used Importantly this will establish the importance and growth of the biobased chemical industry Industrial Arene Chemistry readers will also find Case studies that describe major elements of specific technologies prototyped by contributors companies as part of ongoing market development efforts Process chapters that include summaries of the conventional techniques and a more detailed discussion of recent high impact studies Recent advances in conventional aromatic reactions including alkylation acylation and carboxylation hydrogenation reduction oxidation nitration amination sulfonation and halogenation Industrial Arene Chemistry is a useful reference for chemists and

chemical engineers who work with aromatics Zeolites in Catalysis Jiří Čejka, Russell E Morris, Petr Nachtigall, 2017-06-01
Covering the breadth of zeolite chemistry and catalysis this book provides the reader with a complete introduction to field covering synthesis structure characterisation and applications Beginning with the history of natural and synthetic zeolites the reader will learn how zeolite structures are formed synthetic routes and experimental and theoretical structure determination techniques Their industrial applications are covered in depth from their use in the petrochemical industry through to fine chemicals and more specialised clinical applications Novel zeolite materials are covered including hierarchical zeolites and two dimensional zeolites showcasing modern developments in the field This book is ideal for newcomers who need to get up to speed with zeolite chemistry and also experienced researchers who will find this a modern up to date guide *Catalysis by Ceria and Related Materials* Alessandro Trovarelli, Paolo Fornasiero, 2013 This book follows the 2002 edition of Catalysis by Ceria and Related Materials which was the first book entirely devoted to ceria and its catalytic properties In the ten years since the first edition a massive amount of work has been carried out in the field and ceria has gained a prominent position in catalysis as one of the most valuable material for several applications This second edition covers fundamental and applied aspects of the latest advances in ceria based materials with a special focus on structural redox and catalytic features Special emphasis is given to nano engineered and nano shaped systems which are a key factor in the predictive and rational design of ceria with novel properties In addition the book presents recent advances in emerging and traditional large scale applications of ceria in catalysis such as the treatment of emissions from mobile sources including diesel and gasoline engines The primary readership includes catalysis and material science researchers from academy and industry and postdoctorate and graduate students in chemistry chemical engineering and physics

Zeolites for Cleaner Technologies M. Guisnet, Jean-Pierre Gilson, 2002 This book written and edited by leading authorities from academia and industrial groups covers both preventive and curative zeolite based technologies in the field of chemical processing The opening chapter presents the state of the art in zeolite science The two subsequent chapters summarize the chemistries involved in the processes and the constraints imposed on the catalyst adsorbent Three major areas are covered oil refining petrochemicals and fine chemicals A chapter on the curative use of zeolites in pollution abatement completes this overview In the area of oil refining a general lecture sets the scene for present and future challenges It is followed by in depth case studies involving FCC hydrocracking and light naphtha isomerization Also an entire chapter is devoted to the often overlooked subject of base oils In the area of petrochemicals the processing of aromatics and olefins is described and special attention is paid to the synergy between catalysis and separation on molecular sieves Included is a chapter on the very dynamic field of oxidations In the area of fine chemicals the emerging field of zeolite applications is introduced in a general lecture and specific applications are discussed **Chlorination of Toluene Zeolite L Catalyst Deactivation and Regeneration Study** Yaping Huang, 1997 Catalyst Deactivation Gale R. Peterson, 1987-03-24 **Zeolite Catalysts**

Subhash Bhatia, 2020-07-24 Presented in an easy to read form this book on zeolite catalysis covers all aspects of the subject. It focuses on synthesis, structure, diffusion, deactivation, and industrial applications. This book is an ideal text for courses on catalysis or as a supplementary text for those studying applied or industrial chemistry. It is also a useful resource for anyone who works with zeolites as catalysts in the laboratory, pilot plants, or commercial installations.

Characterization and Design of Zeolite Catalysts Miki Niwa, Naonobu Katada, Kazu Okumura, 2010-08-17 Catalysis and catalyst is a key technology to solve the problems in energy and environment issues to sustain our human society. We believe that comprehensive understanding of the catalysis and catalyst provides us a chance to develop a new catalyst and contributes greatly to our society. However, the field of heterogeneous catalyst is difficult to study and still stays behind more developed fields of chemistry such as organic and physical chemistries. This is a dilemma to the chemists who study the catalysis and catalyst. While we can accomplish the progress in the industrial application, the scientific understanding is not complete yet. A gap between the useful application and incomplete scientific understanding, however, becomes smaller and smaller in recent years. Because zeolites are new crystals and the structure is clearly known, the study on the catalysis using the zeolites is easier than those encountered in other catalysts such as metals and metal oxides. Very fortunately, zeolites provide us the strong acidity with the new distribution which enables various useful catalytic reactions. When some metals and cations are loaded in close to the acid sites, these loaded elements show extraordinary characters and many catalytic reactions proceed thereon.
