Critical Issues in Obstetrics and Gynecology - ECAB - E-Book Gita Ganguly Mukherjee, 2014-12-11 Critical Issues in Obstetrics and Gynecology ECAB E Book      **Critical Issues in Obstetrics - ECAB** Prakash Trivedi, 2009-09-15 Globally pregnancy and childbirth are periods of high morbidity and mortality for women. The key to reducing the risks associated with pregnancy and childbirth is early recognition and provision of high quality care. The aims of critical care issues management are broad: the need to address the defects in conceiving followed by early recognition, prevention and management of preterm births and threatened miscarriages along with studying the essential factors responsible for the same. Infertility has been ranked as one of the greatest sources of stress in a person's life, comparable to a somatic disease such as cancer, and ranked second to that involving the death of a family member or divorce. The role of stress and immunomodulation as a causative factor for infertility has been studied in greater details in recent times due to the changing lifestyles, and a relevant discussion has been provided by the author with specific considerations in the Indian clinical settings. Endometriosis is the disease of the millennium, a sticky perplexing and unconquerable pathology which has remained an enigma. With increased awareness about endometriosis, improved methods of diagnosis like transvaginal sonography, liberal use of laparoscopy and more frequent evaluation of CA 125, the incidence of endometriosis is rising, and thus a clear understanding of the condition with application of the various advances in the recognition and also the new management protocols being followed are the need of the day for the practitioners across the country. The polycystic ovary syndrome (PCOS), which features amenorrhea, hirsutism and obesity, which was initially considered a reproductive and cosmetic concern of young women of reproductive age group, has more recently been recognized to have metabolic and cardiovascular associations that make it of major consequence for women of all age groups worldwide. Keeping in mind the requirements of the society, the practitioners need to update themselves on the current approach and the wide variety of choices now available. This book encompasses the rich experience of the specialists in India who are among the stalwarts in this field.

Obstetrics Counseling - ECAB Uday Thanawala, Hema Divakar, 2012-07-05 Informed choice is the right of an individual. Gynecologists have immense responsibility and a unique opportunity to guide their patients through the various milestones, changes in their life by good counseling: menarche, sexuality, pregnancy, pelvic operations and menopause. Adolescents should be taught about safe sex practices, premarital counseling and contraception. Preconception counseling is also important in the identification of risk factors, disease states and potential teratogens in the pregnancy. The availability of first trimester

prenatal diagnosis and the advent of presymptomatic diagnosis by DNA analysis have created increasing opportunities to avoid disorders characterized by early death severe disease or irreparable mental retardation for example periconceptional maternal folic acid supplementation has now been shown to provide high protective effect against neural tube defects Similarly certain maternal diseases including diabetes lupus and myotonic muscular dystrophy impose potential maternal fetal neonatal and other complications The preconception visits provide important opportunities for intervention avoidance or prevention in these cases The patients ethnicity and medical and genetic family history are key elements in their evaluation whereas patients with prolonged infertility of unknown cause or recurrent spontaneous abortion may have a 3 10% risk of a parental chromosome abnormality which may also require chromosome analysis as do their spouses **ECAB clinical**
