Structure-Based Drug Design for Diagnosis and Treatment of Neurological Diseases Rona R. Ramsay, Giuseppe Di Giovanni, 2017-03-24 European Cooperation in Science and Technology COST supports the collaboration of nationally funded science and technology research through the creation of networks COST is the longest running European framework enhancing cooperation among researchers engineers and scholars across Europe The COST Action CM1103 Structure based drug design for diagnosis and treatment of neurological diseases dissecting and modulating complex function in the monoaminergic systems of the brain is a good example of the advances possible through interdisciplinary collaboration on difficult problems COST Action CM1103 brought together 28 research groups from 18 countries to collaborate for four years on multi target drug design for complex neuropathologies The interdisciplinary expertise of the members is spans the range from computational enzymology to human studies providing outstanding opportunities for the interdisciplinary development of trainees and is reflected in the articles in this e book This Research Topic covers progress in multi target drug design for the complex neuropathologies of

the monoamine system that are apparent for example in Alzheimer's disease After a mini review to introduce the topic of multi target drug design the other articles review the Research topic from their own perspective two from computational approaches three from medicinal chemistry two from molecular pharmacology and two from studies in whole brain This multifaceted approach describes new compounds new methodology and advances in the basic science of understanding the brain This Ebook is based upon work from COST Action CM1103 Structure based drug design for diagnosis and treatment of neurological diseases dissecting and modulating complex function in the monoaminergic systems of the brain supported by COST European Cooperation in Science and Technology COST European Cooperation in Science and Technology is a pan European intergovernmental framework Its mission is to enable break through scientific and technological developments leading to new concepts and products and thereby contribute to strengthening Europe's research and innovation capacities It allows researchers engineers and scholars to jointly develop their own ideas and take new initiatives across all fields of science and technology while promoting multi and interdisciplinary approaches COST aims at fostering a better integration of less research intensive countries to the knowledge hubs of the European Research Area The COST Association an International not for profit Association under Belgian Law integrates all management governing and administrative functions necessary for the operation of the framework The COST Association has currently 36 Member Countries www.cost.eu

Computational and Experimental Approaches in Multi-target Pharmacology Thomas J. Anastasio, 2017-08-24 The next frontier in pharmacology is the development of multi target strategies in which pathological processes are controlled by pharmacologically manipulating them at many different points at once Designing multi target strategies will require deep understanding of the complex physiology that underlies pathological processes It will also require the development of single drugs with multiple targets or combinations of drugs with compatible pharmacokinetics that work synergistically to maximize desirable effects while minimizing unwanted side effects This e Book contains ten original articles each addressing a different aspect of this challenge Together they open new perspectives and show the way forward in the development of multi target therapeutics [Multi-Target Drug Design Using Chem-Bioinformatic Approaches](#) Kunal Roy, 2018-12-13 This detailed book showcases recent advances in computational design of multi target drug candidates involving various ligand and structure based strategies Different chem bioinformatic modeling strategies that can be applied for design of multi target drugs as well as important databases and web servers in connection with multi target drug design are also featured in this collection Written for the Methods in Pharmacology and Toxicology series chapters include the kind of key implementation advice that will aid researchers greatly in their laboratory pursuits Authoritative and practical Multi Target Drug Design Using Chem Bioinformatic Approaches seeks to aid all scientists working in the field of drug discovery research
