Exploring Physical Anthropology Laboratory Manual & Workbook Suzanne E. Walker-Pacheco, 2017-02-01

Exploring Physical Anthropology is a comprehensive full color lab manual intended for an introductory laboratory course in physical anthropology. It can also serve as a supplementary workbook for a lecture class particularly in the absence of a laboratory offering. This laboratory manual enables a hands on approach to learning about the evolutionary processes that resulted in humans through the use of numerous examples and exercises. It offers a solid grounding in the main areas of an introductory physical anthropology lab course: genetics, evolutionary forces, human osteology, forensic anthropology, comparative functional skeletal anatomy, primate behavior, paleoanthropology, and modern human biological variation.

Exploring Human Biology in the Laboratory Matthew M. Douglas, Jonathan M. Douglas, 2016-01-01. Marine Bioinvasions: Patterns, Processes and Perspectives Judith Pederson, 2012-12-06. As the global rate of marine introductions increases, exotic species exert greater economic and ecological impacts affecting ecosystems and human health. The complexity of marine ecosystems challenges our ability to find easy solutions to prevention, management, and control of introductions. This book highlights issues of timely importance in marine bioinvasion science. Selected topics explore the potential evolutionary consequences and ecological impacts of introduced organisms, examine the feasibility of biological control, and describe patterns of introduction. These papers were presented at the Second International Conference on Marine Bioinvasions, which featured new marine invasion research from around the world. These papers should be of interest to scientists, students, and managers with an interest in marine bioinvasions and the application of knowledge to management concerns.

Classification and Human Evolution Sherwood L. Washburn, 2017-07-28. The names given to the variety of man-like fossils known to scientists should reflect no more than scientific views of the nature of human evolution. However, often in the past these names have also reflected confusion regarding the basic principles of scientific nomenclature, and the matter has been further complicated by the many new finds of recent decades. It is the unique purpose of this book to clarify the present state of knowledge regarding the main lines of human evolution by expressing what is known and what is surmised about them in appropriate taxonomic language. The papers in this volume were prepared by the world's leading authorities on the subject and were revised in the light of

discussions at a remarkable conference held in Austria in 1962 under the auspices of the Wenner Gren Foundation The authors review first the meaning of taxonomic statements as such and then consider the substance of our present knowledge regarding the number and characteristics of species among living and extinct primates including man and his ancestors They also examine the relationship of behavior changes and selection pressures in evolutionary sequences Ample illustrations bibliographies and an index enhance the permanent reference value of the book which will undoubtedly prove to be among the fundamental paleoanthropological works of our time
