Differential Geometry Of Curves And Surfaces A Concise Guide:

Differential Geometry of Curves and Surfaces Victor Andreevich Toponogov, 2005-12-05 Central topics covered include curves surfaces geodesics intrinsic geometry and the Alexandrov global angle comparison theorem Many nontrivial and original problems some with hints and solutions Standard theoretical material is combined with more difficult theorems and complex problems while maintaining a clear distinction between the two levels

Differential Geometry of Curves and Surfaces Victor Andreevich Toponogov, 2006-09-10 This concise guide to the differential geometry of curves and surfaces can be recommended to first year graduate students strong senior students and students specializing in geometry The material is given in two parallel streams The first stream contains the standard theoretical material on differential geometry of curves and surfaces It contains a small number of exercises and simple problems of a local nature It includes the whole of Chapter 1 except for the problems Sections 1.5 1.7 1.10 and Section 1.11 about the phase length of a curve and the whole of Chapter 2 except for Section 2.6 about classes of surfaces Theorems 2.8.1 2.8.4 the problems Sections 2.7 4.2 8.3 and the appendix Section 2.9 The second stream contains more difficult and additional material and formulations of some complicated but important theorems for example a proof of A.D. Aleksandrov's comparison theorem about the angles of a triangle on a convex 1 surface formulations of A.V. Pogorelov's theorem about rigidity of convex surfaces and S.N. Bernstein's theorem about saddle surfaces In the last case the formulations are discussed in detail A distinctive feature of the book is a large collection 80 to 90 of nonstandard and original problems that introduce the student into the real world of geometry

Differential Geometry of Curves and Surfaces Victor A. Toponogov, 2006

Differential Geometry and Its Visualization Eberhard Malkowsky, Ćemal Dolićanin, Vesna Veličković, 2023-08-30 Differential Geometry and Its Visualization is suitable for graduate level courses in differential geometry serving both students and teachers It can also be used as a supplementary reference for research in mathematics and the natural and engineering sciences Differential geometry is the study of geometric objects and their properties using the methods of mathematical analysis The classical theory of curves and surfaces in three dimensional Euclidean space is presented in the first three chapters The abstract and modern topics of tensor algebra Riemannian spaces and tensor analysis are studied in the last two chapters A great number of illustrating examples visualizations and genuine figures created by the authors own software are included to support the understanding of the presented concepts and results and to develop an adequate perception of the shapes of geometric objects their properties and the relations between them Features Extensive full colour visualisations Numerous exercises Self contained and comprehensive treatment of the topic

Modeling of Curves and Surfaces with MATLAB® Vladimir Rovenski, 2010-07-03 This text on geometry is devoted to various central geometrical topics including graphs of functions transformations non Euclidean geometries curves and surfaces as well as their applications in a variety of disciplines This book presents elementary methods for analytical modeling and demonstrates the potential for symbolic computational tools to support the

development of analytical solutions The author systematically examines several powerful tools of MATLAB including 2D and 3D animation of geometric images with shadows and colors and transformations using matrices With over 150 stimulating exercises and problems this text integrates traditional differential and non Euclidean geometries with more current computer systems in a practical and user friendly format This text is an excellent classroom resource or self study reference for undergraduate students in a variety of disciplines

Differential Geometry Victor V. Prasolov, 2022-02-10 This book combines the classical and contemporary approaches to differential geometry An introduction to the Riemannian geometry of manifolds is preceded by a detailed discussion of properties of curves and surfaces The chapter on the differential geometry of plane curves considers local and global properties of curves evolutes and involutes and affine and projective differential geometry Various approaches to Gaussian curvature for surfaces are discussed The curvature tensor conjugate points and the Laplace Beltrami operator are first considered in detail for two dimensional surfaces which facilitates studying them in the many dimensional case A separate chapter is devoted to the differential geometry of Lie groups

Tensor Algebra And Analysis For Engineers: With Applications To Differential Geometry Of Curves And Surfaces Paolo Vannucci, 2023-02-27 In modern theoretical and applied mechanics tensors and differential geometry are two almost essential tools Unfortunately in university courses for engineering and mechanics students these topics are often poorly treated or even completely ignored At the same time many existing very complete texts on tensors or differential geometry are so advanced and written in abstract language that discourage young readers looking for an introduction to these topics specifically oriented to engineering applications This textbook mainly addressed to graduate students and young researchers in mechanics is an attempt to fill the gap Its aim is to introduce the reader to the modern mathematical tools and language of tensors with special applications to the differential geometry of curves and surfaces in the Euclidean space The exposition of the matter is sober directly oriented to problems that are ordinarily found in mechanics and engineering Also the language and symbols are tailored to those usually employed in modern texts of continuum mechanics Though not exhaustive as any primer textbook this volume constitutes a coherent self contained introduction to the mathematical tools and results necessary in modern continuum mechanics concerning vectors 2nd and 4th rank tensors curves fields curvilinear coordinates and surfaces in the Euclidean space More than 100 exercises are proposed to the reader many of them complete the theoretical part through additional results and proofs To accompany the reader in learning all the exercises are entirely developed and solved at the end of the book

Circles, Spheres and Spherical Geometry Hiroshi Maehara, Horst Martini, 2024-08-09 This textbook focuses on the geometry of circles spheres and spherical geometry Various classic themes are used as introductory and motivating topics The book begins very simply for the reader in the first chapter discussing the notions of inversion and stereographic projection Here various classical topics and theorems such as Steiner cycles inversion Soddy's hexlet stereographic projection and Poncelet's porism are discussed The book then delves into Bend formulas and the relation of

radii of circles focusing on Steiner circles mutually tangent four circles in the plane and other related notions Next some fundamental concepts of graph theory are explained The book then proceeds to explore orthogonal cycle representation of quadrangulations giving detailed discussions of the Brightwell Scheinerman theorem an extension of the Koebe Andreev Thurston theorem Newton's 13 balls problem Casey's theorem an extension of Ptolemy's theorem and its generalizations The remainder of the book is devoted to spherical geometry including a chapter focusing on geometric probability on the sphere The book also contains new results of the authors and insightful notes on the existing literature bringing the reader closer to the research front Each chapter concludes with related exercises of varying levels of difficulty Solutions to selected exercises are provided This book is suitable to be used as textbook for a geometry course or alternatively as basis for a seminar for both advanced undergraduate and graduate students alike

Differential Geometric Structures and Applications Vladimir Rovenski, Paweł Walczak, Robert Wolak, 2024-03-15 This proceedings contains a collection of selected peer reviewed contributions from the 4th International Workshop Differential Geometric Structures and Applications held in Haifa Israel from May 10-13 2023 The papers included in this volume showcase the latest advancements in modern geometry and interdisciplinary applications in fields ranging from mathematical physics to biology Since 2008 this workshop series has provided a platform for researchers in pure and applied mathematics including students to engage in discussions and explore the frontiers of modern geometry Previous workshops in the series have focused on topics such as Reconstruction of Geometrical Objects Using Symbolic Computations 2008 Geometry and Symbolic Computations 2013 and Geometric Structures and Interdisciplinary Applications 2018

Geometric and Topological Mesh Feature Extraction for 3D Shape Analysis Jean-Luc Mari, Franck Hétroy-Wheeler, Gérard Subsol, 2020-01-02 Three dimensional surface meshes are the most common discrete representation of the exterior of a virtual shape Extracting relevant geometric or topological features from them can simplify the way objects are looked at help with their recognition and facilitate description and categorization according to specific criteria This book adopts the point of view of discrete mathematics the aim of which is to propose discrete counterparts to concepts mathematically defined in continuous terms It explains how standard geometric and topological notions of surfaces can be calculated and computed on a 3D surface mesh as well as their use for shape analysis Several applications are also detailed demonstrating that each of them requires specific adjustments to fit with generic approaches The book is intended not only for students researchers and engineers in computer science and shape analysis but also numerical geologists anthropologists biologists and other scientists looking for practical solutions to their shape analysis understanding or recognition problems
