AGILE AND OPEN C4ISR SYSTEMS

Helping the Military Integrate, Innovate and Secure Networks across the Enterprise

► The U.S. military is tasked with protecting our nation, putting the lives of warfighters and civilians on the line every day. The military must often use outdated systems to respond to enemies using technology to their full advantage. Agile and open C4ISR systems help the military respond quickly to technology changes. These state-of-the-art technology solutions also address key process, budgetary, operational and cultural concerns that impede rapid and effective implementation, upgrades, innovation, integration and situational awareness.

Deployment Of 802154 Sensor Networks For C4isr Operations:

Deployment of 802.15.4 Sensor Networks for C4ISR Operations, 2006 The applications of wireless sensor networks WSNs have risen in recent years both in the civilian and military sectors While a number of WSN based systems have been proposed and developed vast majority of them focus on capability demonstration rather than the issues of deployment As a result even though the systems can serve useful purposes they are very hard to deploy The objective of this thesis is to focus on the deployment issues of WSNs In addition this thesis assesses the optimal configurations and environment that enables the sensor networks to thrive in a C4ISR environment This thesis presents a technology review of the ZigBee and the IEEE 802 15 4 standards which form the core technology in WSNs The thesis also discusses the IEEE 802 15 4 Physical and Media Access Control Layers that comprise the bottom two layers of WSNs This thesis also provides a brief introduction to the hardware and software that deal with WSN technology Lastly this thesis evaluates the military applications of WSNs It is hoped that the military can employ wireless sensors to increase situational awareness attain information superiority and improve decision making Signal, 2008 *Sensor Network Operations* Shashi Phoha, Thomas F. La Porta, Christopher Griffin, 2007-01-29 This excellent title introduces the concept of mission oriented sensor networks as distributed dynamic systems of interacting sensing devices that are networked to jointly execute complex real time missions under uncertainty It provides the latest yet unpublished results on the main technical and application challenges of mission oriented sensor networks The authors of each chapter are research leaders from multiple disciplines who are presenting their latest innovations on the issues Together the editors have compiled a comprehensive treatment of the subject that flows smoothly from chapter to chapter This interdisciplinary approach significantly enhances the science and technology knowledge base and influences the military and civilian applications of this field Author Information Dr Shashi Phoha is the Guest Editor of IEEE Transactions in Mobile Computing Special Issue on Mission Oriented Sensor Networks She is the Head of the Information Sciences and Technology Division of ARL and Professor of Electrical and Computer Engineering at Pennsylvania State University She has led major research programs of multimillion dollars for military sensor networks in industry as well as in academia In addition to more than a hundred journal articles she authored or co authored several books in related areas Dr Thomas La Porta is the Editor of the IEEE Transactions on Mobile Computing He received his B S E E and M S E E degrees from The Cooper Union New York NY and his Ph D degree in Electrical Engineering from Columbia University New York NY He joined the Computer Science and Engineering Department at Penn State in 2002 as a Full Professor He is Director of the Networking Research Center at Penn State Prior to joining Penn State Dr LaPorta was with Bell Laboratories since 1986 He was the Director of the Mobile Networking Research Department Bell Laboratories Lucent Technologies where he led various projects in wireless and mobile networking He is an IEEE Fellow Bell Labs Fellow received the Bell Labs Distinguished Technical Staff Award and an Eta Kappa Nu Outstanding Young Electrical Engineer Award He has

published over 50 technical papers and holds over 20 patents Christopher Griffin holds a Masters degree in Mathematics from Penn State and is currently pursuing his Ph D there Mr Griffin has worked as a research engineer at the Penn State Applied Research Laboratory for the last six years on several DARPA and or Army Research Laboratory sponsored programs including the Emergent Surveillance Plexus ESP program as a lead engineer the DARPA sponsored Semantic Information Fusion program under the SensIT initiative where he co developed a distributed target tracking system and managed the development of a target classification algorithm using Level 1 sensor fusion techniques as a co principal software architect for the DARPA Joint Force Component Controller JFACC initiative an adaptive C2 program aimed at improving Air Force response times and he was the principal software architect for the Boeing ARFL Insertion of Embedding Infosphere Technology IEIST program His areas of research expertise are distributed tracking systems mission oriented control and system modeling

Impact of Random Deployment on Operation and Data Quality of Sensor Networks, 2007 Several applications have been proposed for wireless sensor networks including habitat monitoring structural health monitoring pipeline monitoring and precision agriculture Among the desirable features of wireless sensor networks one is the ease of deployment Since the nodes are capable of self organization they can be placed easily in areas that are otherwise inaccessible to or impractical for other types of sensing systems In fact some have proposed the deployment of wireless sensor networks by dropping nodes from a plane delivering them in an artillery shell or launching them via a catapult from onboard a ship There are also reports of actual aerial deployments for example the one carried out using an unmanned aerial vehicle UAV at a Marine Corps combat centre in California the nodes were able to establish a time synchronized multi hop communication network for tracking vehicles that passed along a dirt road While this has a practical relevance for some civil applications such as rescue operations a more realistic deployment involves the careful planning and placement of sensors Even then nodes may not be placed optimally to ensure that the network is fully connected and high quality data pertaining to the phenomena being monitored can be extracted from the network This work aims to address the problem of random deployment through two complementary approaches The first approach aims to address the problem of random deployment from a communication perspective It begins by establishing a comprehensive mathematical model to quantify the energy cost of various concerns of a fully operational wireless sensor network Based on the analytic model an energy efficient topology control protocol is developed The protocol sets eligibility metric to establish and maintain a multi hop communication path and to ensure that all nodes exhaust their energy in a uniform manner The second approach focuses on addressing the problem of imperfect sensing

Impact of Random Deployment on Operation and Data Quality of Sensor Networks
Waltenegus Dargie, 2010 Wireless Sensor Networks Fadi Al-Turjman, 2018-01-03 Wireless Sensor Networks overcome the difficulties of other monitoring systems However they require further efficiencies for Outdoor Environment Monitoring OEM applications due to their harsh operational conditions huge targeted areas limited energy budget and required 3D setups A

fundamental issue in defeating these practical challenges is deployment planning The deployment plan is a key factor of many intrinsic properties of OEM networks summarized in connectivity lifetime fault tolerance and cost effectiveness This book investigates the problem of WSNs deployments that address these properties in order to overcome the unique challenges and circumstances in OEM applications *Handbook on Sensor Networks* Yang Xiao,Hui Chen, Frank Haizhon Li,2010 Sensor networks have many interesting applications with great utility however their actual deployment and realization rely on continuous innovations and solutions to many challenging problems Thus sensor networks have recently attracted the attention of many researchers and practitioners The compilation of the Handbook on Sensor Networks will meet the demand of the sensor network community for a comprehensive reference and summary of the current state of the area The Handbook on Sensor Networks is a collection of approximately 40 chapters on sensor network theory and applications The book spans a wide spectrum and includes topics in medium access control routing security and privacy coverage and connectivity modeling and simulations multimedia energy efficiency localization and tracking design and implementation as well as sensor network applications **Distributed Sensor Networks, Second Edition** S. Sitharama Iyengar,Richard R. Brooks,2012-09-24 The best selling Distributed Sensor Networks became the definitive guide to understanding this far reaching technology Preserving the excellence and accessibility of its predecessor Distributed Sensor Networks Second Edition once again provides all the fundamentals and applications in one complete self contained source Ideal as a tutorial for students or as research material for engineers the book gives readers up to date practical insight on all aspects of the field Revised and expanded this second edition incorporates contributions from many veterans of the DARPA ISO SENSIT program as well as new material from distinguished researchers in the field Sensor Networking and Applications focuses on sensor deployment and networking adaptive tasking self configuration and system control In the expanded applications section the book draws on the insight of practitioners in the field Readers of this book may also be interested in Distributed Sensor Networks Second Edition Image and Sensor Signal Processing ISBN 9781439862827

Challenges and Opportunities of Connected k-Covered Wireless Sensor Networks Habib M. Ammari,2009-08-05 The decomposition of the difficulties to be resolved or the objects to be known should be pushed up to the simplest elements Such elements are seized directly and completely by the intuition Ren Descartes Discours de la methode 1637 Wireless sensor networks have received significant attention because of their important role and many conveniences in our lives Indeed the recent and fast advances in inexpensive sensor technology and wireless communications have made the design and development of large scale wireless sensor networks cost effective and appealing to a wide range of mission critical situations including civilian natural industrial and military applications such as health and environmental monitoring seismic monitoring industrial process automation and battlefields surveillance respectively A wireless sensor network consists of a large number of very low powered devices called sensors which are randomly or deterministically deployed in a field of interest

while collaborating and coordinating for the successful accomplishment of their mission These sensors suffer from very scarce resources and capabilities such as bandwidth storage CPU battery power or energy sensing and communication to name a few with energy being the most critical one The major challenge in the design process of this type of network is mainly due to the limited capabilities of the sensors and particularly their energy which makes them unreliable Handbook On Sensor Networks Yang Xiao,Hui Chen, Frank Haizhong Li, 2010-08-30 Sensor networks have many interesting applications with great utility however their actual deployment and realization rely on continuous innovations and solutions to many challenging problems Thus sensor networks have recently attracted the attention of many researchers and practitioners The compilation of the Handbook on Sensor Networks will meet the demand of the sensor network community for a comprehensive reference and summary of the current state of the area The Handbook on Sensor Networks is a collection of approximately 40 chapters on sensor network theory and applications The book spans a wide spectrum and includes topics in medium access control routing security and privacy coverage and connectivity modeling and simulations multimedia energy efficiency localization and tracking design and implementation as well as sensor network applications
