NEW EMC LSV Golf Cart

EMC Golf Carts

Golf carts haven't changed a great deal in the last 50 years. While there have been some updates in styling and some "innovations", at the end of the day the packages have not really changed a great deal. Until now.

When EMC golf carts, resort and utility vehicles were introduced to Australia over 7 years ago they were a relatively simple yet robust range of vehicles. The product of a Sino-USA joint venture with final assembly carried out in Australia, today's EMC LSV range of vehicles are equipped with industry-leading performance and safety features not available from most other brands.

While your standard golf cart has two-wheel mechanical brakes, EMC LSVs have 4 wheel hydraulic brakes (Disc front brakes, drum rear brakes). There is also an optional electro-mechanical brake that comes on automatically when the cart is stationary, capable of holding the cart on an incline of up to 30 degrees. When the

vehicle comes to a halt, the brake automatically engages. The vehicle management system pushes the brake off when the accelerator is depressed. There is also a standard manual hand brake.

The regenerative braking feels and works like engine braking: lift your foot from the accelerator pedal and the vehicle rapidly slows. But the exciting part is it generates power and puts it back into the batteries while the vehicle is slowing.

The safety frame and roll protection is designed to add structural strength, and protects the occupant in an accident where there is a roll over. EMC LSV vehicles also include three-point seat belts for when the vehicle is being driven at higher speeds on a public road (EMC LSV vehicles are equipped with the features required for conditional road registration, although an amber beacon light may be required.) EMC LSV range also offer powerful automotive-grade headlights with high and low beam, as well as a dash with instrument cluster.

While most major brands today still only have a 3.2 kilowatt electric motor, the new EMC LSV range sport a powerful 5.3 kilowatt motor, allowing the cart to climb hills with ease. The carts also come with a High/Low power switch, which allow you to switch from the standard 20kph golf course limit to 40kph+ when on roads, etc.

EMC LSV golf carts come with unique numbered keys, increasing security of the cart. EMC LSV vehicles are also fitted with an anti-theft locking system: when you turn the key to the final "off" position, and remove the key the steering system automatically locks.

The EMC LSV range is available in a wide range of configurations for almost as many applications. Long and short wheel base utilities, Resort vehicles with 4, 6 and 8 seats, and all terrain off roaders for use on farms and rough conditions. www.getmobile.com.au

Trojan Battery launches video tutorial series

TROJAN Battery Company is the world's leading manufacturer of deep-cycle batteries and a battery technology pioneer, has recently launched a video tutorial series to expand understanding of deep-cycle battery technologies, maintenance and safety in golf cars.

The first "Trojan Tip" video (available on www.trojanbattery.com) reviews the various battery technologies available on the market today, and what to consider when selecting a battery for a particular application. New tutorials will premier each month throughout 2012.

"One of the most important features of electrically powered equipment, and probably one of the most ignored, is the battery," said Vicki Hall, Trojan's Director of quality and technical services, and host of the "Trojan Tip" Educational series. "The battery is the heart of any piece of electric equipment that relies on batteries for power. When a battery fails in a Golf Car it can make or break a day on the course. Proper understanding of this technology and maintenance practices are key to getting the most out of your battery investment."

Trojan Developed the "Trojan Tip" Series to educate the public on a variety of important battery related subjects that can positively impact the performance and longevity of deep cycle batteries used to power electrical equipment. Topics such as selecting the right battery, maintenance techniques and appropriate charging and equalization guidelines are just a few of the issues that will be addressed during the video tutorial series.

Germanna Road Dr. Peter G. Rainey, 2010-06-30 This is a history of the land and the landowners along Germanna Road and connecting roads from the Rapidan River to Wilderness Run The chapters that follow provide the history of the lower end of Orange County especially the Alexandria Tract with particular attention to the land in and around Lake of the Woods My brother asked me Why should I care about the Alexandria Tract My simple answer was Because we are descendants of Alexander Spotswood He got me to thinking about what motivates anyone to write and especially to research and record one's findings for posterity When the English settler came to Virginia he brought his law and his library The concept of land boundaries and personal ownership were foreign until then as was the concept of written records The land records journals and family records of the five generations of Spotswoods their relatives and neighbors that lived on and near the Lake of the Woods area have been preserved but their story has not previously been written Similarly the modern pioneers that came in the late 1960s and later to form the community of Lake of the Woods should have their story preserved Of all the places within a few hours of Washington D C why pick the Wilderness to develop a large lake recreational community The answer to this question cannot be found in any published history of Orange County Why would families sell their home of generations including the family cemetery The simple answer of for the right price is not the only explanation *The Publishers' Circular and Booksellers' Record*, 1921 **The Software Encyclopedia**, 1997 **Patch-Clamp Methods and Protocols** Peter Molnar, James J. Hickman, 2007 Patch Clamp Methods and Protocols surveys the typical patch clamp applications and advises scientists on identifying problems and selecting the best technique in each instance The experiments described require a basic level of electrophysiological training and aid the researcher in pursuing new areas of electrophysiology and using the patch clamp technique effectively Patch Clamp Methods and Protocols is divided into three sections that cover the major areas of patch clamp application Pharmacology Physiology and Biophysics The first section provides examples and step by step instructions on how to use whole cell and single channel patch clamp methods for testing drugs in industrial settings The second section provides a wide selection of patch clamp applications in physiological studies The last part focuses on the

biophysical applications of the patch clamp method using single channel recordings or statistical analysis of whole cell currents in order to obtain parameters that describe ion channel properties or transmitter release Individual techniques are explored within the area that they are applied most often Researchers will find Patch Clamp Methods and Protocols to be an invaluable aid in the design and execution of a wide variety of patch clamp experiments both on their own and in conjunction with other state of the art methodologies Golfing Curios and "the Like".
