Detection and Estimation for Communication and Radar Systems Kung Yao, Flavio Lorenzelli, Chiao-En Chen, 2013-01-17
Covering the fundamentals of detection and estimation theory this systematic guide describes statistical tools that can be used to analyze design implement and optimize real world systems Detailed derivations of the various statistical methods are provided ensuring a deeper understanding of the basics Packed with practical insights it uses extensive examples from communication telecommunication and radar engineering to illustrate how theoretical results are derived and applied in practice A unique blend of theory and applications and over 80 analytical and computational end of chapter problems make this an ideal resource for both graduate students and professional engineers

Signal Processing Algorithms for Communication and Radar Systems Kung Yao, 2019 Based on time tested course material this authoritative text examines the key topics advanced mathematical concepts and novel analytical tools needed to understand modern communication and radar systems It covers computational linear algebra theory VLSI systolic algorithms and designs practical aspects of chaos theory and applications in beamforming and array processing and uses a variety of CDMA codes as well as acoustic sensing and beamforming algorithms to illustrate key concepts Classical topics such as spectral analysis are also covered and each chapter includes a wealth of homework problems This is an invaluable text for graduate students in electrical and computer engineering and an essential reference for practitioners in communications and radar engineering

OFDM for Underwater Acoustic Communications Sheng Zhou, Zhaohui Wang, 2014-03-21 A blend of introductory material and advanced signal processing and communication techniques of critical importance to underwater system and network development This book which is the first to describe the processing techniques central to underwater OFDM is arranged into four distinct sections First it describes the characteristics of underwater acoustic channels and stresses the difference from wireless radio channels Then it goes over the basics of OFDM and channel coding The second part starts with an overview of the OFDM receiver and develops various modules for the receiver design in systems with single or multiple transmitters This is the main body of the book Extensive experimental data sets are used to verify the receiver performance In the third part the authors discuss applications of the OFDM receiver in i deep water channels which may contain very long separated multipath clusters ii interference rich environments where an unintentional interference such as Sonar will be present and iii a network with multiple users where both non cooperative and cooperative underwater communications are developed Lastly it describes the development of a positioning system with OFDM waveforms and the progress on the OFDM modem development Closely related industries include the development and manufacturing of autonomous underwater vehicles AUVs and scientific sensory equipment AUVs and sensors in the future could integrate modems based on the OFDM technology described in this book Contents includes Underwater acoustic channel characteristics OFDM basics Peak to average ratio control Detection and Doppler estimation Doppler scale and CFO Channel estimation and noise estimation A

block by block progressive receiver and performance results Extensions to multi input multi output OFDM Receiver designs for multiple users Cooperative underwater OFDM Physical layer network coding and dynamic coded cooperation Localization with OFDM waveforms Modem developments A valuable resource for Graduate and postgraduate students on electrical engineering or physics courses electrical engineers underwater acousticians communications engineers *Radar Signal Analysis and Processing Using MATLAB* Bassem R. Mahafza, 2016-04-19 Offering radar related software for the analysis and design of radar waveform and signal processing Radar Signal Analysis and Processing Using MATLAB provides a comprehensive source of theoretical and practical information on radar signals signal analysis and radar signal processing with companion MATLAB code Aft *MATLAB Simulations for Radar Systems Design* Bassem R. Mahafza, Atef Elsherbeni, 2003-12-17 Simulation is integral to the successful design of modern radar systems and there is arguably no better software for this purpose than MATLAB But software and the ability to use it does not guarantee success One must also Understand radar operations and design philosophy Know how to select the radar parameters to meet the design req
