De Toekomst Van Het Ouder Worden:

The Elderly in 2005: Health and Care Steering Committee on Future Health Scenarios, 1994-04-30 The first STG report to embody scenarios on population aging health and care appeared in 1985 This report describes developments since 1985 reviewing the current position and setting out updated scenarios The 1985 report set out three scenarios in which the central focus was on the developing future pattern of demand for care by the elderly The present report too sets out three scenarios centring on the demand for care in which account is taken of a variety of factors it also details four strategic scenarios whose central focus is on the developing supply of care and which set supply and demand one against the other Three of the strategic scenarios emphasizing respectively intramural extramural and informal care suppose the demand for care to be met in full the fourth scenario which rolls current policies on the care of the elderly forward into the future pinpoints discrepancies between the need for care and the extent to which that need is likely to be met making clear in so doing that a review of long term policy for the elderly is urgently needed

AIDS up to the Year 2000 Scenario Committee on AIDS, E.J. Ruitenberg, F.M.L.G. van den Boom, J.C. de Jager, D.P. Reinkind, M.J. Postma, C.E.S. Albers, 2012-12-06 In March 1983 the Secretary of State for Welfare Health and Cultural Affairs appointed the Steering Committee on Future Health Scenarios STG The task of the STG is to advise the Minister on the future of public health and health care in the long term in the Netherlands with a view to increasing the anticipatory capacity of government policy Since 1983 the STG has set up a number of committees including the Scenario Committee on AIDS with a view to mapping out possible scenarios in their particular field of interest The committees report in the form of scenario reports which are of relevance not just to the national government but also to others involved in policy development and opinion formation in the field in question What proportions will the HIV AIDS epidemic assume and how many new HIV infections can be averted by HIV AIDS prevention campaigns How much care and support will people with HIV and AIDS need and what successes can be expected within the care sector What will be the social consequences of AIDS and how can ostracism and the social isolation of people with HIV and AIDS be avoided These and other related questions form the subject of this book which examines the sociocultural and economic impact of AIDS in the Netherlands up to the year 2000 The book presents a study carried out by the Netherlands Institute of Mental Health NcGv and the National Institute of Public Health and Environmental Protection RIVM under the direction of the STG Scenario Committee on AIDS The researchers look back at the epidemiological sociocultural and economic impact of AIDS in the Netherlands during the first decade of the epidemic and on the basis of this use scenario analysis to project the impact of AIDS up to the year 2000 The future projections relate both to the impact of AIDS and the maximization of efforts to combat the disease In addition to a scenario exploring the impact of AIDS if developments continue unchanged alternative scenarios are also put forward These focus on the impact of significant changes in such diverse fields as sexual behaviour injecting drug use the effectiveness and organization of HIV AIDS prevention programmes and the

demand for delivery of care The book concludes that the impact of AIDS will only become fully apparent in the second decade of the epidemic The authors consider the implications of this conclusion for HIV AIDS prevention programmes research care and the efforts to counter the socially undesirable impacts of AIDS

Caring for Mental Health in the Future Scenario Committee on Mental Health and Mental Health Care, 2012-12-06 9 1 311 9 2 The results in the four areas 313 9 3 Likely causes of the growing demand for services 314 9 4 The dominant perception of mental health problems 315 9 5 A shifting balance 317 9 6 Mental health problems as a policy issue 319 311 9 7 Culture dependence as an approach 9 8 Culture dependence and the four themes 322 9 9 The value of a social cultural approach 323 9 10 Two core notions normality and identity 325 9 11 Conclusions and policy options 328 Bibliography 333 Appendix Basic assumptions in the exploratory and target setting scenarios 368 v Preface This study of mental health issues breaks new ground The task set by the Steering Committee on Future Health Scenarios was twofold encompassing issues relating both to mental health and to mental health care Discussions of mental health normally narrow down immediately to a focus on its care this study in contrast seeks to deal with mental health as a theme in its own right alongside that of mental health care This task led to the establishment of a broadly based committee whose members possessed a wide range of knowledge and experience in the field The study was carried out by an equally expert team from the Netherlands Institute of Mental Health In the course of the study over a hundred people with wide ranging expertise took part in consultative panels

Health Surveillance of Individual Workers Exposed to Chemical Agents Wilfried R.F. Notten, Rob F.M. Herber, William J. Hunter, Aart C. Monster, Reinier L. Zielhuis, 2012-12-06 Early in 1985 a meeting was held to discuss the organization of a workshop in honour of Professor Reinier L. Zielhuis on the occasion of his retirement on November 30 1986 Various themes for such a workshop were considered but it was Zielhuis himself who ultimately selected Health surveillance of individual workers exposed to chemical agents as the theme of the workshop Although this topic is of the utmost importance for occupational health practice it is also a very difficult one given our currently limited knowledge on the subject The choice of this topic is characteristic of Reinier Zielhuis a scientist and scholar who throughout his career has been deeply concerned with the health and health risks of workers Because he regards occupational and environmental exposure including life style as two aspects of the total exposure to chemical and physical factors he emphasizes the need to assess the impact of this total exposure on workers health The impact of total exposure probably determines to a large extent the individual variability in response This was the main reason why he selected the above mentioned topic for the workshop

Primary Care and Home Care Scenarios 1990-2005 Steering Committee on Future Health Scenarios, 2012-12-06 CARE AT HOME HOME CARE Health care in the Netherlands looks to be a well structured system Supplementing the vital level of self care and informal care are four levels of professional care the public health service known in the Netherlands as basic health care is mainly concerned with preventive work aimed at the population at large individuals with problems can contact their general practitioner or other

primary care provider who can depending on the problem refer them to specialists in the cure oriented and hospital centred secondary sector where necessary patients can then be referred on to the institutions of the tertiary sector with their role in mainly long term care On paper this pyramidal structure appears to work well in practice and in particular where complex forms of care are involved the boundaries become blurred Medical advances and social and economic developments may delay death to ever greater ages but disease is not defeated and since the risk of developing chronic conditions rises with age more and more people become incapacitated and those who do remain so for longer This leads to a growing demand for care and compels us to reconsider patterns of provision The need for such reconsideration is reinforced by users changing needs and aspirations as patients increasingly wish to be nursed and cared for in their own surroundings if at all possible Technological advances mean that wish can often be accommodated *The search for meaning in later life* Nienke P. M. Fortuin, 2020 The search for meaning in later life An empirical exploration of religion and death draws on thorough qualitative and quantitative research among older Dutch adults The scarcity of vital narratives of ageing and the fragmentation of religious grand narratives appear to complicate their search for meaning Moreover increased longevity and the medicalisation of death challenge many older adults to decide about the right timing of death This study qualitatively and quantitatively explores narratives of ageing and of religion expressed by older Dutch adults and their attitudes toward death euthanasia and life prolongation *Anticipating and Assessing Health Care Technology, Volume 2*, 2012-12-06 As noted in the Foreword this report is the second of several volumes resulting from this study of future health care technology The purpose of the study as formulated by the STG was to analyze future health care technology Part of the task was to develop an early warning system for health care technology The primary goal of the project was to develop a list or description of a number of possible and probable future health care technologies as well as information on their importance Within the limits of time and money this has been done This report is the description of anticipated future health care technologies However given the vast number of possible future health care technologies complete information on the importance of each area could not be developed in any depth for all technology Therefore four specific technologies were chosen and were prospectively assessed These future technologies were examined in more depth looking particularly at their future health and policy implications Subsequently the project was extended to September 1987 and two additional technologies are being assessed

Anticipating and Assessing Health Care Technology Scenario Commission on Future Health Care Technology, 2012-12-06 As noted in the Foreword this report is one of several volumes resulting from this study of future health care technology The purpose of the study as formulated by the STG was to analyze future health care technology Part of the task was to develop an early warning system for health care technology The primary goal of the project was to develop a list or description of a number of possible and probable future health care technologies as well as information on their importance Within the limits of time and money this has been done However given the vast number of possible future health

care technologies complete information on the importance of each area could not be developed in any depth for all technology Therefore four specific technologies were chosen and were prospectively assessed These future technologies were examined in more depth looking particularly at their future health and policy implications Subsequently the project was extended to September 1987 and two additional technologies were chosen for assessment *Psychiatrische problemen van de oude dag* L.
