Scientific and Technical Aerospace Reports ,1995 Plant Ecophysiology: Responses to Climate Changes and Stress Conditions Srdjan Stojnic,Nacer Bellaloui,Raul Antonio Sperotto,Yanbo Hu, Georgios Koubouris,Peter Petrik,2025-10-23 Climate change characterized by amplified frequency and amplitude of heat waves increased evaporative demand and altered precipitation patterns threatening the productivity and stability of ecosystems worldwide Previous research identified a number of abiotic and biotic stressors that affects plant physiology and contributes to natural ecosystems decline as well as crop yield failure Depending on their intensity and duration plant species may display a wide range of strategies and mechanisms to withstand environmental stress including physiological and biochemical responses as well as modulation in structural characteristics such as anatomy and morphology However despite the great progress made in understanding plant responses and tolerance to environmental stress factors a holistic and systematic knowledge on the effect of multiple simultaneous and or sequential stress factors and their interactions is still lacking In addition climate change imposes the alteration of a series of environmental factors simultaneously as well as intensify the severity of different stressful events such as drought floods salinity and heat waves Therefore knowledge of how plants acclimate to multiple stressors is critical in understanding the effects of future climates on natural ecosystems urban greenery and agroforestry systems i e tree crops interaction worldwide

Flying Magazine ,1944-10 **Key-words-in-context** **Title Index** ,1962 Ethylene: A Key Regulatory Molecule in Plants Nafees A. Khan,M. Iqbal R. Khan,Antonio Ferrante,Péter Poór,2017-12-21 Ethylene is a simple gaseous phytohormone with multiple roles in regulation of metabolism

at cellular molecular and whole plant level It influences performance of plants under optimal and stressful environments by interacting with other signaling molecules Understanding the ethylene biosynthesis and action through the plant's life can contribute to improve the knowledge of plant functionality and use of this plant hormone may drive adaptation and defense of plants from the adverse environmental conditions The action of ethylene depends on its concentration in cell and the sensitivity of plants to the hormone In recent years research on ethylene has been focused due to its dual action on the regulation of plant processes at physiological and molecular level The involvement of ethylene in the regulation of transcription needs to be widely explored involving the interaction with other key molecular regulators The aim of the current research topic was to explore and update our understanding on its regulatory role in plant developmental mechanisms at cellular or whole plant level under optimal and changing environmental conditions The present edited volume includes original research papers and review articles describing ethylene's regulatory role in plant development during plant ontogeny and also explains how it interacts with biotic and abiotic stress factors This comprehensive collection of researches provide evidence that ethylene is essential in different physiological processes and does not always work alone but in coordinated manner with other plant hormones This research topic is also a source of tips for further works that should be addressed for the biology and molecular effects on plants
