Managing Protected Areas in Central and Eastern Europe

Under Climate Change Sven Rannow, Marco Neubert, 2014-01-18 Beginning with an overview of data and concepts developed in the EU project HABIT CHANGE this book addresses the need for sharing knowledge and experience in the field of biodiversity conservation and climate change There is an urgent need to build capacity in protected areas to monitor assess manage and report the effects of climate change and their interaction with other pressures The contributors identify barriers to the adaptation of conservation management such as the mismatch between planning reality and the decision context at site level Short and vivid descriptions of case studies drawn from investigation areas all over Central and Eastern Europe illustrate both the local impacts of climate change and their consequences for future management These focus on ecosystems most vulnerable to changes in climatic conditions including alpine areas wetlands forests lowland grasslands and coastal areas The case studies demonstrate the application of adaptation strategies in protected areas like National Parks Biosphere Reserves and Natural Parks and reflect the potential benefits as well as existing obstacles A general section

provides the necessary background information on climate trends and their effects on abiotic and biotic components. Often the parties to policy change and conservation management including managers, land users and stakeholders lack both expertise and incentives to undertake adaptation activities. The authors recognise that achieving the needed changes in behavior/habit is as much a social learning process as a matter of science-based procedure. They describe the implementation of modeling, impact assessment and monitoring of climate conditions and show how the results can support efforts to increase stakeholder involvement in local adaptation strategies. The book concludes by pointing out the need for more work to communicate the cross-sectoral nature of biodiversity protection, the value of well-informed planning in the long-term process of adaptation, the definition of acceptable change and the motivational value of exchanging experience and examples of good practice.

Park Science, 2009 **Climate Change in Wildlands** Andrew J Hansen, William B Monahan, S. Thomas Olliff, David M. Theobald, 2016-06-07

Scientists have been warning for years that human activity is heating up the planet and climate change is under way. We are only just beginning to acknowledge the serious effects this will have on all life on Earth. The federal government is crafting broad-scale strategies to protect wildland ecosystems from the worst effects of climate change. One of the greatest challenges is to get the latest science into the hands of resource managers entrusted with vulnerable wildland ecosystems. This book examines climate and land use changes in montane environments, assesses the vulnerability of species and ecosystems to these changes and provides resource managers with collaborative management approaches to mitigate expected impacts. *Climate Change in Wildlands* proposes a new kind of collaboration between scientists and managers: a science-derived framework and common-sense approaches for keeping parks and protected areas healthy on a rapidly changing planet.

Encyclopedia of the Anthropocene, 2017-11-27

Encyclopedia of the Anthropocene Five Volume Set presents a currency-based global synthesis cataloguing the impact of humanity's global ecological footprint. Covering a multitude of aspects related to Climate Change, Biodiversity, Contaminants, Geological Energy and Ethics, leading scientists provide foundational essays that enable researchers to define and scrutinize information, ideas, relationships, meanings and ideas within the Anthropocene concept. Questions widely debated among scientists, humanists, conservationists, politicians and others are included, providing discussion on when the Anthropocene began, what to call it, whether it should be considered an official geological epoch, whether it can be contained in time and how it will affect future generations. Although the idea that humanity has driven the planet into a new geological epoch has been around since the dawn of the 20th century, the term Anthropocene was only first used by ecologist Eugene Stoermer in the 1980s and hence popularized in its current meaning by atmospheric chemist Paul Crutzen in 2000. Presents comprehensive and systematic coverage of topics related to the Anthropocene with a focus on the Geosciences and Environmental science. Includes point-counterpoint articles debating key aspects of the Anthropocene, giving users an even-handed navigation of this complex area. Provides historic seminal papers and essays from leading scientists and philosophers who demonstrate changes in the

literature on climate adaptation and hazard mitigation Bruce Glavovic and Gavin Smith each bring to the editing task a rare blend of solid scholarly attainment and on the ground experience that shines through in this extensively documented synthesis of theoretical ideas from the realms of climate and hazards and their validation in a rich set of diverse case studies pulled in from around the world This book should remain a classic for many years William H Hooke American Meteorological Society

Protection of the Three Poles Falk Huettmann, 2012-03-19 The Arctic the Antarctic and the Hindu Kush Himalayas form a trio of terrains sometimes called the three poles Mainly composed of rock snow and ice these precious regions which are home to many unique species such as the polar bear the emperor penguin and the snow leopard contain the primary water resource of this planet and directly shape our climate This book presents a first ever global assessment and progressive review of the three poles and demonstrates the urgent need for their protection Sins of the past have irrevocably harmed and threatened many of the unique qualities of these regions and the future looks bleak with the global population forecast to reach 9 billion by 2060 and with climate change on the rise Presented here is a wide reaching and coherent overview of the three poles biodiversity habitats and ongoing destruction Failed protection and social targets set by the United Nations and other bodies are exposed while economic growth unconstrained or inappropriate development and urban sprawl are promoted unabated Polar regions play a major role in the global agenda as they are rich in oil and other resources marking them for contamination overfishing and further degradation Tourism in the Antarctic has benefited from enlightened self regulation but there are signs that this is changing too The chapters of this book are written by experts in their fields and their evidence leaves no doubt that we already live beyond our carrying capacity on a finite but decaying space A global protection role model and several outlook scenarios are proposed to help set in motion polar protection priorities that are actually valid Humanity has demonstrated through international treaties such as the Antarctic Treaty and the Madrid Protocol that we can put the interests of the planet as a whole first This must become the norm not the exception

from object oriented to agent oriented software engineering methodologies - Aug 22 2022

web object oriented methodologies are well established and have been used as one input for the creation of methodologies
suitable to support the development of agent oriented software systems while these agent oriented ao methodologies vary in
a framework for evaluating agent oriented methodologies - Feb 25 2023

web to resolve these problems we devise a framework for evaluating and comparing agent oriented methodologies this
framework focuses on four major aspects of a methodology concepts and properties notations and modelling techniques
process and pragmatics
