

TRANE™

Compresor Climatuff™

El "corazón" de cada sistema. Para que su bomba de calor o acondicionador de aire mantenga su hogar confortable, el compresor se ve en la necesidad de bombear fuertemente. El compresor es el componente más importante de su acondicionador de aire. Un compresor de calidad le garantiza una unidad más confiable, de mayor duración y de más alta eficiencia. El Compresor Climatuff de Trane ha comprobado su confiabilidad en más de siete millones de instalaciones. Además, está diseñado y fabricado para cumplir con los requerimientos de los modelos con los cuales se utiliza. Es por ello que decimos que es el "corazón" del sistema.

Si quiere que esté bien hecho . . .

Dice el refrán, "si quieres que esté bien hecho, hazlo tu mismo". Esto también puede aplicarse a los compresores. La mayoría de los fabricantes de equipos de aire acondicionado adquieren sus compresores de distintas fuentes de abastecimiento, por lo cual tienen poco control sobre la calidad de los mismos. Pero no Trane. Nosotros "lo hacemos nosotros mismos", por lo que "está bien hecho". En realidad, no solo diseñamos y fabricamos el compresor terminado, sino que también fabricamos la mayoría de sus partes internas. Cada compresor cumple con las especificaciones rigurosas de nuestros Ingenieros. El compresor Climatuff está diseñado para proporcionarle años de confort.

Protección Integrada

Todos los compresores están sujetos a condiciones de trabajo las cuales pueden esforzarlo al límite. El compresor Climatuff no solo maneja los esfuerzos de la operación cotidiana, sino también los extraordinarios que se dan en ocasiones, tales como climas extremadamente calientes durante

largo tiempo y alteraciones en la corriente eléctrica. Un relámpago, por ejemplo, puede matar el compresor. El compresor Climatuff fue diseñado para afrontar estos esfuerzos y continuar su funcionamiento, proporcionándole a usted el confort deseado.

El diseño básico del Compresor Climatuff incluye varias características importantes que proporcionan protección integrada al compresor. Examinemos de cerca algunas de estas características que ofrecen protección contra algunos posibles problemas químicos, eléctricos y mecánicos.

- Las conexiones eléctricas al motor se hacen a través de una terminal hermética de metal-a-vidrio. El casco o envoltorio del compresor está soldado para sellar y aislar el aceite y el refrigerante dentro del compresor contra la humedad y otros contaminantes en el exterior del compresor.
- Una carcasa de aluminio reduce el esfuerzo térmico que se obtiene con las carcasas de fierro fundido que retienen el calor.
- La bomba de aceite, centrífuga, auto-contenida, hace circular instantáneamente un aceite altamente refinado. Esta ingeniosa bomba de aceite separa el refrigerante del aceite, lubrica todas las superficies de los rodamientos y enfría los rodamientos y el motor.
- La configuración de las válvulas de trabajo pesado está diseñada para tolerar condiciones de retorno de líquido refrigerante (filtros sucios, sobrecarga de refrigerante, ciclos de descarche) sin dañar a las propias válvulas en sí.
