Autonomous driving algorithms and Its IC Design Jianfeng Ren,Dong Xia,2023-08-09 With the rapid development of artificial intelligence and the emergence of various new sensors autonomous driving has grown in popularity in recent years The implementation of autonomous driving requires new sources of sensory data such as cameras radars and lidars and the algorithm processing requires a high degree of parallel computing In this regard traditional CPUs have insufficient computing power while DSPs are good at image processing but lack sufficient performance for deep learning Although GPUs are good at training they are too power hungry which can affect vehicle performance Therefore this book looks to the future arguing that custom ASICs are bound to become mainstream With the goal of ICs design for autonomous driving this book discusses the theory and engineering practice of designing future oriented autonomous driving SoC chips The content is divided into thirteen chapters the first chapter mainly introduces readers to the current challenges and research directions in autonomous driving Chapters 2 6 focus on algorithm design for perception and planning control Chapters 7 10 address the optimization of deep learning models and the design of deep learning chips while Chapters 11 12 cover automatic driving software architecture design Chapter 13 discusses the 5G application on autonomous driving This book is suitable for all undergraduates graduate students and engineering technicians who are interested in autonomous driving *Smoke*

**Intelligent Satellite Design and Implementation** Jianjun Zhang,Jing Li,2023-10-13 INTELLIGENT SATELLITE DESIGN AND IMPLEMENTATION Integrate cutting edge technology into spacecraft design with this groundbreaking work Artificial intelligence and machine learning have revolutionized virtually every area of computing and complex engineering and the design of satellite spacecraft is no exception Intelligent satellites are increasingly capable of human like perception decision making and operations and their problem solving capacities are still expanding As AI and machine learning continue to advance their integration into satellite manufacture will only deepen Intelligent Satellite Design and Implementation seeks to understand the foundations of this integration and its likely directions in the coming years Beginning from the basic principles of interaction between artificial intelligence and satellite design and mission planning the book analyzes a series of current or potential areas of technological advancement to create a comprehensive overview of the subject Intelligent Satellite Design and Implementation readers will also find Background information on the introduction and development of artificial intelligence Detailed discussion of topics including autonomous satellite operation remote sensing satellites and many more Over 100 illustrations and tables to reinforce key concepts Intelligent Satellite Design and Implementation is ideal for graduate students and advanced undergraduates in engineering computing and spacecraft design programs as well as researchers in these and related fields

*Designing Optimal Strategies for Mineral Exploration* J.G. De Geoffroy,T.K. Wignall,2012-12-06 Few knowledgeable people would deny that the field of mineral exploration is facing some difficult times in the foreseeable future Among the

woes we can cite a worldwide economic uneasiness reflected by sluggish and at times widely fluctuating metal prices global financial uncertainties and relentless pressures on costs despite a substantial slowing down of the rate of inflation Furthermore management is forced to turn to more sophisticated and expensive technologies and to look farther afield to more remote regions as the better quality and more easily accessible ore deposits have now been revealed This rather gloomy outlook should persuade explorationists to cast about for a new philosophy with which to guide mineral exploration through the challenging decades ahead Once already in the early 1960s a call for change had been heard Ref 30 in Chapter 1 when it became obvious that the prospecting methods of yesteryear so successful in the past could not keep up with the rapidly growing demand for minerals of the postwar period The answer a massive introduction of sophisticated geophysical and geochemical technologies backed by new geological models proved spectacularly successful throughout the 1960s and the 1970s But for both economic and technological reasons the brisk pace of the last two decades has considerably slowed down in the early 1980s as if a new threshold has been reached

**Efficient Design of Variation-Resilient Ultra-Low Energy Digital Processors** Hans Reyserhove, Wim Dehaene, 2019-03-27 This book enables readers to achieve ultra low energy digital system performance The author's main focus is the energy consumption of microcontroller architectures in digital sub systems The book covers a broad range of topics extensively from circuits through design strategy to system architectures The result is a set of techniques and a context to realize minimum energy digital systems Several prototype silicon implementations are discussed which put the proposed techniques to the test The achieved results demonstrate an extraordinary combination of variation resilience high speed performance and ultra low energy

**Safety Design for Space Systems** Gary Eugene Musgrave, Axel Larsen, Tommaso Sgobba, 2009-03-27 Progress in space safety lies in the acceptance of safety design and engineering as an integral part of the design and implementation process for new space systems Safety must be seen as the principle design driver of utmost importance from the outset of the design process which is only achieved through a culture change that moves all stakeholders toward front end loaded safety concepts This approach entails a common understanding and mastering of basic principles of safety design for space systems at all levels of the program organisation Fully supported by the International Association for the Advancement of Space Safety IAASS written by the leading figures in the industry with frontline experience from projects ranging from the Apollo missions Skylab the Space Shuttle and the International Space Station this book provides a comprehensive reference for aerospace engineers in industry It addresses each of the key elements that impact on space systems safety including the space environment natural and induced human physiology in space human rating factors emergency capabilities launch propellants and oxidizer systems life support systems battery and fuel cell safety nuclear power generators NPG safety habitat activities fire protection safety critical software development collision avoidance systems design operations and on orbit maintenance The only comprehensive space systems safety reference it must have status within space agencies and suppliers technical and

**Hyperspectral Satellites and System Design** Shen-En Qian,2020-04-02 Hyperspectral Satellites and System Design is the first book on this subject It provides a systematic analysis and detailed design of the entire development process of hyperspectral satellites Derived from the author s 25 year firsthand experience as a technical lead of space missions at the Canadian Space Agency the book offers engineers scientists and decision makers detailed knowledge and guidelines on hyperspectral satellite system design trade offs performance modeling and simulation optimization from component to system level subsystem design and implementation strategies This information will help reduce the risk shorten the development period and lower the cost of hyperspectral satellite missions This book is a must have reference for professionals in developing hyperspectral satellites and data applications It is also an excellent introductory book for early practitioners and students who want to learn more about hyperspectral satellites and their applications Design Studies and Intelligence Engineering Valentina Emilia Balas,Qun Wu,2023-01-15 The technologies applied in design studies vary from basic theories to more application based systems Intelligence engineering also plays a significant role in design sciences such as computer aided industrial design human factor design and greenhouse design and intelligent engineering technologies such as computational technologies sensing technologies and video detection encompass both theory and application perspectives Being multidisciplinary in nature intelligence engineering promotes cooperation exchange and discussion between organizations and researchers from diverse fields This book presents the proceedings of DSIE 2022 the International Symposium on Design Studies and Intelligence Engineering held in Hangzhou China on 29 30 October 2022 This annual conference proves a platform for professionals and researchers from industry and academia to exchange and discuss recent advances in the field of design studies and intelligence engineering inviting renowned experts from around the world to speak on their specialist topics and allowing for in depth discussion with presenters The 189 submissions received were each carefully reviewed by 3 or 4 referees and the 62 papers accepted for presentation and publication were selected based on their scores Papers cover a very wide range of topics from the design of a bachelor apartment or a children s backpack for healthy spine development to interpretable neural symbol learning methods and design elements extraction from point cloud datasets using deep enhancement learning Offering a varied overview of recent developments in design and intelligence engineering this book will be of interest to all those working in the field The State of the Science in Universal Design: Emerging Research and Developments Jordana L.
