

Low Idle

When the throttle lever is set at idling position after the engine is started, the tension of governor spring is reduced. The sliding sleeve is pushed right by the centrifugal force of the weights. The governor lever is pushed to the right by the sliding sleeve.

The connecting plate and the control rack are moved to the right by the governor lever and the idle spring is pulled by the connecting plate. The control rack is kept at a position where a centrifugal force and the force of the governor spring are balanced.

FIGURE 16

High Idle

When the throttle lever is set at high speed position, the governor spring is pulled by the swingle lever. The control rack is moved leftward and the fuel injection amount is increased.

As the engine speed increases, the centrifugal force of the weights increases. When the centrifugal force of the weights is equal to the tension of the governor spring, the control rack is kept at high speed running position.
