The E.R. Loading Dock; Real Life EMS Stories From Around The World Eric Liddy,

Sound of Mercy: A Paramedic's Story , Contagion Chaser Lee F. Walters, 2022-11-18 Picking up where his previous book *Rescues from the Sky* left off *Contagion Chaser* details Dr Lee F Walters transition from saving lives at sea as part of an air medical rescue team with the US Coast Guard to becoming an infectious disease detective Starting with a one year medical residency at the University of Wisconsin he moved on to a two year fellowship in infectious disease at the University of Vermont before beginning private practice in Arizona which lasted over two decades Although the infectious disease practice in which Walters engaged was a far cry from the highly dramatic and potentially life threatening rescues described in the first book this memoir offers a different type of adrenaline rush as he seeks to discover the causes of various mystery diseases and find a treatment before it s too late With his patients lives often hanging in the balance it s an emotional journey that frequently leaves Walters feeling discouraged and depressed as his patients die due to lack of available treatments especially when the HIV AIDS pandemic hits in 1981 Supporting him throughout his investigations is the

love of his life Cara Their relationship provides a heartfelt and romantic counterpoint to the heavy emotional burden of Lee's work

Chasing Men on Fire Stephen G. Waxman, 2018-03-09 A thirty year quest from genes to pain signaling neurons to people with a rare genetic disorder that makes them feel they are on fire Two soldiers both with wounds injuring the same nerve show very different responses one is disabled by neuropathic pain unable to touch the injured limb because even the lightest contact triggers excruciating discomfort the other notices numbness but no pain at all Could the difference lie in their genes In this book described in the foreword by Nobel Laureate James Rothman as so well written that it reads like a detective novel Stephen Waxman recounts the search for a gene that controls pain a search spanning more than thirty years and three continents The story moves from genes to pain signaling neurons that scream when they should be silent to people with a rare genetic disorder who feel they are on fire Waxman explains that if pain signaling neurons are injured by trauma or disease they can become hyperactive and send pain signals to the brain even without external stimulus Studying the hyperactive mutant pain gene in man on fire syndrome has pointed the way to molecules that produce pain more broadly within the general population in the rest of us Waxman's account of the many steps that led to discovery of the pain gene tells the story behind the science of how science happens
