Social Media Mining Reza Zafarani, Mohammad Ali Abbasi, Huan Liu, 2014-04-28 The growth of social media over the last decade has revolutionized the way individuals interact and industries conduct business Individuals produce data at an unprecedented rate by interacting sharing and consuming content through social media Understanding and processing this new type of data to glean actionable patterns presents challenges and opportunities for interdisciplinary research novel algorithms and tool development Social Media Mining integrates social media social network analysis and data mining to provide a coherent platform to understand the basics and potentials of social media mining It introduces the unique problems arising from social media data and presents fundamental concepts emerging issues and effective algorithms for network analysis and data mining Suitable for use in advanced undergraduate and beginning graduate courses as well as professional short courses the text contains exercises of different degrees of difficulty that improve understanding and help apply concepts principles and methods for social media mining

Detecting Fake News on Social Media Kai Shu, Huan Liu, 2022-05-31 In the past decade social media has become increasingly popular for news consumption due to its easy access fast dissemination and low cost However social media also enables the wide propagation of fake news i e news with intentionally false information Fake news on social media can have significant negative societal effects Therefore fake news detection on social media has recently become an emerging research area that is attracting tremendous attention This book from a data mining perspective introduces the basic concepts and characteristics of fake news across disciplines reviews representative fake news detection methods in a principled way and illustrates challenging issues of fake news detection on social media In particular we discussed the value of news content and social context and important extensions to handle early detection weakly supervised detection and explainable detection The concepts algorithms and methods described in this lecture can help harness the power of social media to build effective and intelligent fake news detection systems This book is an accessible introduction to the study of detecting fake news on social media It is an essential reading for students researchers and practitioners to understand manage and excel in this area This book is supported by additional materials including lecture slides the complete set of figures key references datasets tools used in this book and the source code of representative algorithms The readers are encouraged to visit the book website for the latest information <http://dmml.asu.edu/dfn>

Mining Human Mobility in Location-Based Social Networks Huiji Gao, Huan Liu, 2022-06-01 In recent years

there has been a rapid growth of location based social networking services such as Foursquare and Facebook Places which have attracted an increasing number of users and greatly enriched their urban experience Typical location based social networking sites allow a user to check in at a real world POI point of interest e g a hotel restaurant theater etc leave tips toward the POI and share the check in with their online friends The check in action bridges the gap between real world and online social networks resulting in a new type of social networks namely location based social networks LBSNs Compared to traditional GPS data location based social networks data contains unique properties with abundant heterogeneous information to reveal human mobility i e when and where a user who has been to for what corresponding to an unprecedented opportunity to better understand human mobility from spatial temporal social and content aspects The mining and understanding of human mobility can further lead to effective approaches to improve current location based services from mobile marketing to recommender systems providing users more convenient life experience than before This book takes a data mining perspective to offer an overview of studying human mobility in location based social networks and illuminate a wide range of related computational tasks It introduces basic concepts elaborates associated challenges reviews state of the art algorithms with illustrative examples and real world LBSN datasets and discusses effective evaluation methods in mining human mobility In particular we illustrate unique characteristics and research opportunities of LBSN data present representative tasks of mining human mobility on location based social networks including capturing user mobility patterns to understand when and where a user commonly goes location prediction and exploiting user preferences and location profiles to investigate where and when a user wants to explore location recommendation along with studying a user s check in activity in terms of why a user goes to a certain location

Mining Structures of Factual Knowledge from Text Xiang Ren, Jiawei Han, 2022-05-31 The real world data though massive is largely unstructured in the form of natural language text It is challenging but highly desirable to mine structures from massive text data without extensive human annotation and labeling In this book we investigate the principles and methodologies of mining structures of factual knowledge e g entities and their relationships from massive unstructured text corpora Departing from many existing structure extraction methods that have heavy reliance on human annotated data for model training our effort light approach leverages human curated facts stored in external knowledge bases as distant supervision and exploits rich data redundancy in large text corpora for context understanding This effort light mining approach leads to a series of new principles and powerful methodologies for structuring text corpora including 1 entity recognition typing and synonym discovery 2 entity relation extraction and 3 open domain attribute value mining and information extraction This book introduces this new research frontier and points out some promising research directions

Modeling and Mining Ubiquitous Social Media Martin Atzmueller, Alvin Chin, Denis Helic, Andreas Hotho, 2012-09-10 This book constitutes the joint thoroughly refereed post proceedings of the Second International Workshop on Modeling Social Media MSM 2011 held in Boston MA USA in October 2011 and the Second

International Workshop on Mining Ubiquitous and Social Environments MUSE 2011 held in Athens Greece in September 2011 The 9 full papers included in the book are revised and significantly extended versions of papers submitted to the workshops They cover a wide range of topics organized in three main themes communities and networks in ubiquitous social media mining approaches and issues of user modeling privacy and security

Multidimensional Mining of Massive Text Data Chao Zhang, Jiawei Han, 2022-06-01 Unstructured text as one of the most important data forms plays a crucial role in data driven decision making in domains ranging from social networking and information retrieval to scientific research and healthcare informatics In many emerging applications people's information need from text data is becoming multidimensional they demand useful insights along multiple aspects from a text corpus However acquiring such multidimensional knowledge from massive text data remains a challenging task This book presents data mining techniques that turn unstructured text data into multidimensional knowledge We investigate two core questions 1 How does one identify task relevant text data with declarative queries in multiple dimensions 2 How does one distill knowledge from text data in a multidimensional space To address the above questions we develop a text cube framework First we develop a cube construction module that organizes unstructured data into a cube structure by discovering latent multidimensional and multi granular structure from the unstructured text corpus and allocating documents into the structure Second we develop a cube exploitation module that models multiple dimensions in the cube space thereby distilling from user selected data multidimensional knowledge Together these two modules constitute an integrated pipeline leveraging the cube structure users can perform multidimensional multigranular data selection with declarative queries and with cube exploitation algorithms users can extract multidimensional patterns from the selected data for decision making The proposed framework has two distinctive advantages when turning text data into multidimensional knowledge flexibility and label efficiency First it enables acquiring multidimensional knowledge flexibly as the cube structure allows users to easily identify task relevant data along multiple dimensions at varied granularities and further distill multidimensional knowledge Second the algorithms for cube construction and exploitation require little supervision this makes the framework appealing for many applications where labeled data are expensive to obtain

Exploiting the Power of Group Differences Guozhu Dong, 2022-05-31 This book presents pattern based problem solving methods for a variety of machine learning and data analysis problems The methods are all based on techniques that exploit the power of group differences They make use of group differences represented using emerging patterns aka contrast patterns which are patterns that match significantly different numbers of instances in different data groups A large number of applications outside of the computing discipline are also included Emerging patterns EPs are useful in many ways EPs can be used as features as simple classifiers as subpopulation signatures characterizations and as triggering conditions for alerts EPs can be used in gene ranking for complex diseases since they capture multi factor interactions The length of EPs can be used to detect anomalies outliers and novelties Emerging contrast

pattern based methods for clustering analysis and outlier detection do not need distance metrics avoiding pitfalls of the latter in exploratory analysis of high dimensional data EP based classifiers can achieve good accuracy even when the training datasets are tiny making them useful for exploratory compound selection in drug design EPs can serve as opportunities in opportunity focused boosting and are useful for constructing powerful conditional ensembles EP based methods often produce interpretable models and results In general EPs are useful for classification clustering outlier detection gene ranking for complex diseases prediction model analysis and improvement and so on EPs are useful for many tasks because they represent group differences which have extraordinary power Moreover EPs represent multi factor interactions whose effective handling is of vital importance and is a major challenge in many disciplines Based on the results presented in this book one can clearly say that patterns are useful especially when they are linked to issues of interest We believe that many effective ways to exploit group differences power still remain to be discovered Hopefully this book will inspire readers to discover such new ways besides showing them existing ways to solve various challenging problems

Phrase Mining from Massive Text and Its Applications Jialu Liu,Jingbo Shang,Jiawei Han,2022-06-01 A lot of digital ink has been spilled on big data over the past few years Most of this surge owes its origin to the various types of unstructured data in the wild among which the proliferation of text heavy data is particularly overwhelming attributed to the daily use of web documents business reviews news social posts etc by so many people worldwide A core challenge presents itself How can one efficiently and effectively turn massive unstructured text into structured representation so as to further lay the foundation for many other downstream text mining applications In this book we investigated one promising paradigm for representing unstructured text that is through automatically identifying high quality phrases from innumerable documents In contrast to a list of frequent n grams without proper filtering users are often more interested in results based on variable length phrases with certain semantics such as scientific concepts organizations slogans and so on We propose new principles and powerful methodologies to achieve this goal from the scenario where a user can provide meaningful guidance to a fully automated setting through distant learning This book also introduces applications enabled by the mined phrases and points out some promising research directions

Yeah, reviewing a books **Community Detection And Mining In Social Media Huan Liu** could increase your near associates listings. This is just one of the solutions for you to be successful. As understood, realization does not suggest that you have fantastic points.

Comprehending as with ease as conformity even more than new will allow each success. neighboring to, the proclamation as competently as sharpness of this Community Detection And Mining In Social Media Huan Liu can be taken as competently as picked to act.
