Conservation Science: Balancing the Needs of People and Nature Peter Kareiva, Michelle Marvier, 2024-07-25 Focused on protecting nature and the planet Conservation Science Balancing the Needs of People and Nature contains a heavy emphasis on highlighting strategies to better connect the practice of conservation with the needs and priorities of a growing human population to give you an overview of this important area of science *What is Conservation Science?* Peter Kareiva, 2012 In 1985 Michael Soule asked What is conservation biology We revisit this question more than 25 years later and offer a revised set of core principles in light of the changed global context for conservation Most notably scientists now widely acknowledge that we live in a world dominated by humans and therefore the scientific underpinnings of conservation must include a consideration of the role of humans Today s conservation science incorporates conservation biology into a broader interdisciplinary field that explicitly recognizes the tight coupling of social and natural systems Emerging priorities include pursuing conservation within working landscapes rebuilding public support working with the corporate sector and paying better attention to human rights and equity We argue that in conservation strategies must be promoted that simultaneously maximize the preservation of biodiversity and the improvement of human well being *Conservation Science and Action* William J. Sutherland, 2009-07-01 Conservation Science and Action is intended for upper level undergraduate and graduate courses in conservation biology This book reviews the latest thinking and approaches and in doing so provides a readily accessible reference work for conservation professionals and managers Because conservation biology is now one of the most dynamic disciplines in the life sciences William Sutherland and his international team of authors have selected many of the liveliest topics where key advances are currently being made They stress ideas point to unresolved issues and suggest possible future developments Finally since conservation is an applied subject the book s emphasis throughout is on action Essential reading for senior undergraduate and postgraduate students taking courses in conservation biology one of the most dynamic disciplines in the life sciences Contributions from leading figures in the field who have selected the liveliest topics where key advances are being made Reviews the latest thinking and approaches Contributors cover a range of taxonomic groups include aquatic and terrestrial plants and animals and give examples from around the world Emphasis given to action and all chapters have an applied component *Effective Conservation Science* Peter Kareiva, Michelle Marvier, Brian Silliman, 2017-10-06 This novel text assembles some of the most intriguing voices in modern conservation biology Collectively they highlight many of the most challenging questions being asked in conservation science today each of which will benefit from new experiments new data and new analyses The book s principal aim is to inspire readers to tackle these uncomfortable issues head on A second goal is to be reflective and consider how the field has reacted to challenges to orthodoxy and to what extent have or can these challenges advance conservation science Furthermore several chapters discuss how to guard against confirmation bias The overall goal is that this book will lead to greater conservation of

ecosystems and biodiversity by harnessing the engine of constructive scientific scepticism in service of better results

Conservation Science and Advocacy for a Planet in Peril Dominick A. DellaSala, 2021-08-18 Conservation Science and Advocacy for a Planet in Peril Speaking Truth to Power helps equip scientists working on environmental and sustainability challenges with new tactics for success Global efforts and cooperation by member states of environmental conventions have steadily increased but lack efficient and scalable mechanisms of translating conservation science to policy The gap between science and policy is growing and very little time remains before the climate change and biodiversity losses trigger widespread disruptions of the planet's life support systems This book covers these important topics providing a must read for environmental and conservation scientists climate change activists students social scientists economic professionals sustainable businesses and policymakers Provides an unprecedented collection of local regional and national case studies from scientists and practitioners engaged in outreach to decision makers and the public Covers personal accounts that bring science into policymaking providing usable guidelines for those working to bridge this gap Includes the requisite information needed for effective communications and campaign strategies by sharing lessons learned Conservation Biology Andrew S. Carleton Ray, Jerry McCormick-Ray, 2013-12-31 Providing a guide for marine conservation practice Marine Conservation takes a whole systems approach covering major advances in marine ecosystem understanding Its premise is that conservation must be informed by the natural histories of organisms together with the hierarchy of scale related linkages and ecosystem processes The authors introduce a broad range of overlapping issues and the conservation mechanisms that have been devised to achieve marine conservation goals The book provides students and conservation practitioners with a framework for thoughtful critical thinking in order to incite innovation in the 21st century Marine Conservation presents a scholarly but eminently readable case for the necessity of a systems approach to conserving the oceans combining superb introductions to the science law and

policy frameworks with carefully chosen case studies This superb volume is a must for anyone interested in marine conservation from students and practitioners to lay readers and policy makers Simon Levin George M Moffett Professor of Biology Department of Ecology Evolutionary Biology Princeton University *Conservation Research, Policy and Practice* William J. Sutherland, Peter N. M. Brotherton, Zoe G. Davies, Nancy Ockendon, Nathalie Pettorelli, Juliet A. Vickery, 2020-04-16 Conservation research is essential for advancing knowledge but to make an impact scientific evidence must influence conservation policies decision making and practice This raises a multitude of challenges How should evidence be collated and presented to policymakers to maximise its impact How can effective collaboration between conservation scientists and decision makers be established How can the resulting messages be communicated to bring about change Emerging from a successful international symposium organised by the British Ecological Society and the Cambridge Conservation Initiative this is the first book to practically address these questions across a wide range of conservation topics Well renowned experts guide readers through global case studies and their own experiences A must read for practitioners researchers graduate students and policymakers wishing to enhance the prospect of their work making a difference This title is also available as Open Access on Cambridge Core *Conservation Science* The Getty Conservation Institute, 2020
