The Future of Arid Lands-Revisited Charles F. Hutchinson, Stefanie M. Herrmann, 2007-12-07 UNESCO commemorated its sixtieth anniversary in 2005 It was a year for reflection a time to look back on the progress made and the achievements accomplished over the last 60 years To celebrate the importance and relevance of science at UNESCO a publication entitled *Sixty Years of Science at UNESCO 1945 2005* was launched in 2006 which offers an insight into the organization's commitment towards and endeavors in science from the past through to the present day Within the United Nations System UNESCO has one of the longest traditions in addressing dryland problems from a scientific point of view As it happened arid zones were precisely at the centre of UNESCO's earliest efforts at international scientific collaboration in the study of natural resources The first international research program dealing with these zones was launched back in 1951 under the direction of an International Advisory Committee It was continued until 1964 after being raised to the status of a Major Project of the Organization in 1957 This Major Project was a pioneer program in many respects One of its merits and not the least was that it blazed a trail in its interdisciplinary approach to the study of natural resources and its holistic view of the problems of arid and semiarid zones

Hacia el Futuro Maria Eugenia Ibarrarán, Roy Boyd, 2006-09-09 The past 25 years have witnessed an increasing worldwide concern over the issue of climate change and the specter of immense environmental and economic damage which would accompany unmitigated global warming trends National governments in the industrialized world along with numerous multinational organizations have made a strong case for curbing the use of fossil fuels as an energy source and agreements such as the Kyoto Protocol have come about largely due to their efforts Many groups of researchers in both the natural and social sciences have made great strides in understanding this complicated issue To date however the vast majority of climate change literature has addressed the topic from a European North American or global perspective and the implications for developing countries have largely received only cursory treatment This book represents a major step forward in addressing the issue of climate from the perspective of a country in the developing world It highlights the climate change concerns for a particular developing country Mexico and analyses the economic impacts of different policies designed to mitigate the use of fossil fuels in the context of economic development and growth The effects of energy pricing policies technological change carbon sequestration and tradable permits are all economically modeled and discussed at length by the authors Of particular

interest are the issues that these authors raise for policy makers such as the tradeoffs between environmental concerns economic growth and income distribution *Climate Variability and Extremes during the Past 100 years* Stefan Brönnimann,Jürg Luterbacher,Tracy Ewen,Henry F. Diaz,Richard S. Stolarski,Urs Neu,2007-12-20 This volume provides an up to date overview of climate variability during the 20th century in the context of natural and anthropogenic variability It compiles a number of contributions to a workshop held in Gwatt Switzerland in July 2006 dealing with different aspects of climate change variability and extremes during the past 100 years The individual contributions cover a broad range of topics The volume fills a gap in this exciting field of research Climate Change: An Integrated Perspective Pim Martens,J. Rotmans,2006-04-11 Global climate change rapid substantial and human induced may have radical consequences for life on earth The problem is a complex one however demanding a multi disciplinary approach A simple cost benefit analysis cannot capture the essentials nor can the issue be reduced to an emissions reduction game as the Kyoto process tries to do It is much more sensible to adopt an integrative approach which reveals that global climate change needs to be considered as a spider in a web a triggering factor for a range of other related problems land use changes water supply and demand food supply energy supply human health air pollution etc But an approach like this which takes account of all items of knowledge known and uncertain does not produce clear cut final and popular answers It does provide useful insights however which will allow comprehensive and effective long term climate strategies to be put into effect Climate Change An Integrated Perspective will appeal to a broad spectrum of readers It is a useful source for the climate change professionals such as policy makers and analysts natural and social scientists It is also suitable for educationalists students and indeed anyone interested in the fascinating world of multidisciplinary research underlying our approach to this global change issue

Comparative Environmental Politics Jerry McBeath,Jonathan Rosenberg,2006-07-10 While we cannot hope to provide definitive answers to these questions as political scientists we proceed from the assumption that much can be learned through the application of the existing tools of comparative political analysis Two of the incidents occurred in developing countries one a parliamentary democracy the other a democratizing presidential system and one occurred in a highly developed presidential democracy All three countries are federal systems with multiple layers of environmental regulation although sub national government seems to be better institutionalized and more effective in the United States Only one of the incidents occurred within the sovereign territory of a country with an effective federal environmental protection agency and highly transparent policy and judicial processes None of the three nation states involved has a strong green political party And the affected communities in all three cases remain dissatisfied with the outcomes to varying degrees What can we make of these observations Is there a systematic relationship between them or any other political social cultural or economic factors and the responses to environmental crises by nation states To answer these questions a more systematic analysis of the attendant political processes is needed Only then can we suggest whether hope or despair is a more appropriate reaction

Alexander A. Chukhlantsev, 2006-07-18 Research into microwave radiation from the Earth's surface in the presence of vegetation canopies as well as the development of algorithms for retrieval of soil and vegetation parameters from microwave radiometric measurements have been actively conducted for the last 30 years by scientific groups worldwide The capability of the microwave radiometric method to determine soil moisture and vegetation biometric indices was revealed 25 years ago by the author and his colleagues Soil moisture and vegetation covers play a key role in the hydrological cycle and in water and energy transfer on the border of land surface and atmosphere through evaporation and transpiration Accomplishment of large international projects shows that microwave radiometry of soil and vegetation has become an instrument of practical application and operational use A systematic account of questions concerning the microwave radiometry of the Earth's surface in the presence of vegetation canopies is the main objective of the book
