Accompany's 9780521673761 **Conservation Concepts** Kurt Jax, 2023-10-31 This book provides a review of the multitude of conservation concepts both from a scientific, philosophical, and social science perspective, asking how we want to shape our relationships with nature as humans and providing guidance on which conservation approaches can help us to do this. Nature conservation is a contested terrain, and there is not only one idea about what constitutes conservation, but many different ones which sometimes are conflicting. Employing a conceptual and historical analysis, this book sorts and interprets the differing conservation concepts with a special emphasis on narrative analysis as a means for describing human-nature relationships and for linking conservation science to practice and to society at large. Case studies illustrate the philosophical issues and help to analyse major controversies in conservation biology. While the main focus is on Western ideas of conservation, the book also touches upon non-Western, including indigenous concepts. The approach taken in this book emphasises the often implicit strategic and societal dimensions of conservation concepts, including power relations. In finding a path through the multitude of concepts, the book showcases that it is necessary to maintain the plurality of approaches in order to successfully address different situations and societal choices. Overall, this book highlights the very tension which conservation biology must withstand between science and society, between what is possible and what we want individually or as a society, or even more, what is desirable. Bringing some order into this multitude will support more efficient conservation and conservation biology. This book will be of great interest to students and scholars studying nature conservation from a variety of disciplines, including biology, ecology, anthropology, sociology, geography, and philosophy. It will also be of use to professionals wanting to gain an understanding of the broad spectrum of conservation concepts and approaches and when to

apply them **Biology of Conservation Efforts** Ahilya Bandopadhyay, 2025-01-23 Biology of Conservation Efforts delves into the scientific discipline of conservation biology born out of the urgent need to address biodiversity loss habitat degradation and the depletion of genetic resources Highlighting humanity's responsibility as stewards of the natural world this book explores how human mismanagement misguided economic policies and institutional failures have contributed to the unprecedented threats facing biodiversity today The book examines the history and development of conservation biology as a sub discipline the concept of biodiversity and the interconnectedness of ecosystems Readers will gain insights into efforts to preserve biodiversity including scientific research ethical considerations and conservation activism It also discusses the critical role of biodiversity in ecosystem services such as soil formation water purification nutrient cycling and pollution breakdown This book is an essential guide for understanding the challenges and strategies involved in preserving our planet's natural heritage for future generations *Conservation in the Anthropocene* Fred Van Dyke, 2025-03-06 This book provides a critical assessment of conservation in the Anthropocene grounded in the personal historical and cultural development of human interaction with nature The author argues that conservation can no longer be primarily about preserving nature but must adapt its efforts to promote changes through which humans create a landscape that is neither abandoned nor degraded but used well by humans and non humans alike The book first reviews the origin of ideas and conditions that have led to the concept and classification of the Anthropocene and explores how the author's own interactions with nature were shaped through his experience as a conservation biologist Next it considers how humans have come to be the primary drivers of ecological activity geological events and climate change Chapters then focus on the need for new conservation thinking regarding novel ecosystems urban conservation the role of Indigenous Peoples in conservation and the value of protected areas PAs parks and wilderness The book concludes by identifying strategies for effective conservation and argues for a new formulation of conservation values that redefine human relationships and interaction with nature Chapters are enlivened by the personal experiences of the author and the first person narratives of conservation activists and scientists throughout the world who are learning to practice and succeed in conservation efforts under Anthropogenic conditions Drawing on global examples this book will be of great value to students and scholars of biodiversity conservation and environmental science ready to consider a new way of looking at the care and nurture of nature in the Anthropocene

Dusty Earthlings John Mustol, 2018-01-01 The Lord God formed a man from the dust of the ground Genesis 2:7 Made of dust we humans are thoroughly physical beings We are dusty earthlings As such we are also ecological beings or rather eco physical beings firmly embedded in and dependent upon God's earthly ecosystems which support and provide for us and constitute our earthly home Today we are living in ways that are damaging our home As Christian dusty earthlings we are called to oversee God's earthly creation and to follow Jesus Christ God incarnated as a dusty earthling How do we do this in the face of the array of ecological problems we face today How can we obey the ecological principles and limits that govern

all of life on God's good earth Mustol argues that the virtues of humility voluntary self limitation and the principles of kenosis and justice will help as we seek to follow Jesus as dusty earthlings in today's world

Ecological Statistics Gordon A. Fox, Simoneta Negrete-Yankelevich, Vinicio J. Sosa, 2015-01-29 The application and interpretation of statistics are central to ecological study and practice Ecologists are now asking more sophisticated questions than in the past These new questions together with the continued growth of computing power and the availability of new software have created a new generation of statistical techniques These have resulted in major recent developments in both our understanding and practice of ecological statistics This novel book synthesizes a number of these changes addressing key approaches and issues that tend to be overlooked in other books such as missing censored data correlation structure of data heterogeneous data and complex causal relationships These issues characterize a large proportion of ecological data but most ecologists training in traditional statistics simply does not provide them with adequate preparation to handle the associated challenges Uniquely Ecological

Statistics highlights the underlying links among many statistical approaches that attempt to tackle these issues. In particular, it gives readers an introduction to approaches to inference, likelihoods, generalized linear mixed models, spatially or phylogenetically structured data, and data synthesis, with a strong emphasis on conceptual understanding and subsequent application to data analysis. Written by a team of practicing ecologists, mathematical explanations have been kept to the minimum necessary. This user-friendly textbook will be suitable for graduate students, researchers, and practitioners in the fields of ecology, evolution, environmental studies, and computational biology who are interested in updating their statistical tool kits. A companion web site provides example data sets and commented code in the R language. *Environmental Issues And Policies* Adarsh Pandey, Keshav Shukla, Dr. Jyoti Ahlawat, Ms. Raveena Negi, Mr. Dhruv Kumar Pandey, 2023-07-29.
