The Connectivity of Innovation in the Construction Industry Malena Ingemansson Havenvid, Åse Linné, Lena E. Bygballe, Chris Harty, 2019-04-01 The construction industry is currently experiencing accelerating developments concerning societal demands along with project complexity internationalization and digitalization In an attempt to grasp the consequences of these demands on productivity and innovation this edited book addresses how innovation is likely to take place with a more long term perspective on the construction sector While existing literature focuses on organizational discontinuity and fragmentation as the main reasons for the apparent lack of innovation in the industry this book highlights the connectivity of construction actors resources and activities as fundamental for understanding how innovation takes place Through 15 empirically grounded chapters the book shows how innovation is part of construction processes on various levels including project firm and industry and that these innovation processes are characterized by organizational and technological connectivity over time Written by European business management scholars the chapters cover empirical cases and examples from both a multi organizational and a multi international perspective in terms of covering the viewpoints of different industry actors and the contexts of several different European

countries including Sweden Norway the UK Italy France Hungary and Poland By illustrating how connectivity is part of innovation processes in the creation of single product innovations of various innovations within and across projects as well as a fundamental aspect of the processes in which innovations cross nations the book provides a new angle on how to understand construction innovation and where the industry might or needs to be heading next This book is essential reading for anyone interested in construction management project management engineering management innovation studies business and management studies

Handbook of Construction Project Management Deepak Bajaj,2025-10-29 This handbook is designed to serve as a comprehensive guide tailored to managing construction projects within the unorganized sector which is often characterized by small scale informal operations that lack structured management practices This handbook places a special emphasis on emerging economies where the unorganized sector plays a significant role in the construction industry This book aims to provide a robust foundation in construction project management by covering essential principles and practices necessary for effective project management It focuses on offering practical solutions and strategies to improve project delivery cost management and operational efficiency within the unorganized sector Additionally the book emphasizes sustainability and the integration of innovative technologies promoting green practices and digital transformation By adopting a holistic approach it incorporates socioeconomic considerations stakeholder engagement and capacity building to foster improvements across the sector Real world case studies and examples are included to illustrate the successful application of various methodologies and highlight lessons learned Content from this book can also be used to supplement classroom teaching for courses related construction project management and the building construction profession aimed and practicing building engineers construction professionals and even architects The contents of this book will be useful to researchers academics and practitioners alike

Supply Chain Management and Logistics in Construction Greger Lundesjö,2015-06-03 The construction logistics manager plays an increasingly central role in the construction process In fact their decisions can crucially affect the success or failure of a project Recognition of the critical role they play has spurred evermore interest in this budding field amongst both researchers and practitioners An accessible text on construction logistics Supply Chain Management and Logistics in Construction provides essential guidance and expert advice for construction managers as well as researchers and students in the field This important new title looks at arrangements with suppliers the use of returnable packaging and off site manufacture and assembly IT systems used to manage the supply chain

and logistics operations such as delivery management systems warehouse management systems and material planning and forecasting systems It also considers aspects of the contractual relationships between client developer main contractor and lower tier contractors all of which have an impact on how the supply chain is managed In addition to providing a range of fresh ground breaking case studies the book features contributions from leading experts in the field who have been involved in projects with companies such as TFL BAA The Red Cross as well as big construction programmes such as the Olympics and Cross Rail

Recent Trends in Transportation Infrastructure, Volume 2 Amit Agarwal, S. Velmurugan, Akhilesh Kumar Maurya, 2023-06-30 This book presents the select proceedings of the 2nd International Conference on Transportation Infrastructure Projects Conception to Execution TIPCE 2022 at IIT Roorkee and emphasizes the understanding of transportation infrastructure projects being conceptualized designed and executed so as to bring the desired development in the focused area It comprises case studies from the transportation sector construction industries consulting agencies and research and academic institutions These studies present the bottlenecks experienced during the implementation of the projects from their conceptualization to their execution and the corrective measures that were incorporated to finish the work The book will be a valuable reference for beginners researchers and professionals interested in construction planning and technology infrastructure engineering highway engineering traffic and transportation planning and systems

Construction Logistics Solutions in Urban Areas Mats Janné, 2018-05-15 More and more people are living in or moving to urban areas than ever before This attraction to urban areas means that new houses and work places are needed Building new houses or renovating older housing stock is a natural way for a city to evolve However the end products of construction projects are produced at their place of consumption This means that a multitude of materials and resources need to be delivered to and removed from each construction site This leads to new transport flows being created in urban areas In urban areas these transports are subjected to space limitations environmental demands accessibility demands and noise restrictions This has led to a situation where material deliveries to construction sites needs to be coordinated and managed in ways that reduce their impact on the urban transport system and at the same time ensuring efficient construction projects In essence construction in urban areas faces two problems the urban transport problem and the problem of coordinating multiple construction stakeholders One way to address these problems is through the use of construction logistics solutions such as terminals e g construction logistics centres and checkpoints The aim of both types of solutions is to control and coordinate construction transports In the construction industry these solutions are however still a rather new phenomenon This means that how these solutions are perceived by different stakeholders and the effect the solutions have on material flows and costs needs to be explored further The purpose of this thesis is to explore how construction logistics solutions can be used as a means to coordinate material flows to ensure efficient construction and reduce disturbances on the urban transport system To achieve this purpose the following research questions have been addressed RQ1 How are different

stakeholders in the construction industry affected by construction logistics solutions RQ2 How will the use of construction logistics solutions affect material flows and costs in urban construction projects To answer the research questions two main methodologies have been used case study research for the empirical studies and literature reviews for the analysis of the case studies as well as for understanding how supply chain management logistics and third party logistics affects the inter organizational relationships of the construction industry The main findings of the research are firstly that construction logistics solutions do have a role to play in the coordination of different construction stakeholders Adding this new node will force construction stakeholders to address coordination issues in order to ensure that material deliveries arrive to construction sites on time This also implies that new inter organizational relationships will evolve where communication is key However this may not be an easy task as it will call for an attitude adjustment towards a more open and collaborative environment Secondly adding a construction logistics solution can reduce some unnecessary friction between construction stakeholders and third parties Coordinated material flows can lead to a reduction in the amount of material delivery vehicles that travels to site thus alleviating some of the congestion in the urban transport system This will not reduce all friction between construction projects and third parties but it is a step in the right direction Thirdly a construction logistics solution must come with a set of regulations and a governance strategy from the initiator of the solution This governance strategy must be clearly stated and communicated to the affected stakeholders To alleviate animosity towards the solution flexibility and stakeholder involvement is key If the directly affected stakeholders are consulted on the function chances are that they will be more accepting of the solution
