Cini Insulation Manual Industries:

Corrosion Under Insulation (CUI) Guidelines, 2014-01-23 Corrosion under insulation CUI refers to the external corrosion of piping and vessels that occurs underneath externally clad jacketed insulation as a result of the penetration of water. By its very nature, CUI tends to remain undetected until the insulation and cladding jacketing is removed to allow inspection or when leaks occur. CUI is a common problem shared by the refining, petrochemical, power, industrial, onshore and offshore industries. The European Federation of Corrosion (EFC) Working Parties WP13 and WP15 have worked to provide guidelines on managing CUI together with a number of major European refining, petrochemical and offshore companies including BP, Chevron, Texaco, Conoco, Phillips, ENI, Exxon, Mobil, IFP, MOL, Scanraff, Statoil, Shell, Total and Borealis. The guidelines within this document are intended for use on all plants and installations that contain insulated vessels, piping and equipment. The guidelines cover a risk-based inspection methodology for CUI, inspection techniques including non-destructive evaluation methods and recommended best practice for mitigating CUI, including design of plant and equipment, coatings and the use of thermal spray techniques, types of insulation, cladding, jacketing materials and protection guards. The guidelines also include case studies. Guidelines cover inspection methodology for CUI, inspection techniques including non-destructive evaluation methods and recommended best practice. Case studies are included illustrating key points in the book.

Corrosion Under Insulation (CUI) Guidelines Gino De Landtsheer, 2020-08-22 *Corrosion Under Insulation CUI Guidelines Technical Guide for Managing CUI Third Edition Volume 55* builds upon the success of the first two editions to provide a fully up-to-date practical source of information on how to monitor and manage insulated systems. In the first edition of this book published in 2008, the EFC Working Parties WP13 and WP15 engaged together to provide guidelines on managing CUI with contributions from a number of European refining, petrochemical and offshore companies. The guidelines were intended for use on all plants and installations that contain insulated vessels, piping and equipment and cover a risk-based inspection methodology for CUI, inspection techniques and recommended best practices for mitigating CUI. The guidelines include design of plant and equipment, coatings and the use of thermal spray techniques, types of insulation, cladding, jacketing materials and protection guards. Corrosion under insulation (CUI) refers to the external corrosion of piping and vessels that occurs underneath externally clad jacketed insulation as a result of the penetration of water. By its very nature, CUI tends to remain undetected until the insulation and cladding jacketing is removed to allow inspection or when leaks occur. CUI is a common problem shared by the refining, petrochemical, power, industrial, onshore and offshore industries. Provides revised and updated technical guidance on managing CUI provided by EFC Working Parties 13 and 15. Discusses the standard approach to risk-based inspection methodology. Presents the argument that CUI is everywhere and looks at mitigating actions that can be started from the onset. Includes a wide array of concepts of corrosion mitigation.
