

CAMSHAFT AND SLIDE BAR BUSHINGS

THE tools shown in Figure 1 should be used when removing and installing the bushings to distribute the pressure evenly around the edge of the bushings, thus preventing their being damaged. Bushing clearances are held to very close limits and a slight amount of distortion will cause the camshaft to bind in the bushings. The clearance between the camshaft and bushings on a new housing is between .002" and .004". When this clearance exceeds .010", replacement of the bushings or camshaft, or both, is necessary to insure proper operation.
