

Conceptual Physics Exam Review Questions

Rotational/Circular Motion

1. What is center of gravity?
The average position of all of an objects weight..... in other words the center of an objects weight
2. What does center of gravity have to do with balancing?
support must be below the COG
3. Which will balance better, an object w/ a low COG or a high COG?
Low COG
4. Can an object have a COG that is outside of the actual object? (think of a donut)
Yes,..... donut, boomerang
5. What is torque?
A rotational push or pull..... Force multiplied by lever arm (distance from axis)
6. What is it easier to open a door when you push on the side away from the hinge than on the same side as the hinge?
Larger lever arm means more torque
7. If you applied a torque to a meterstick that was balanced on a pivot what would happen?
It would rotate
8. If you have a meterstick that is balanced on a pivot, with weights on either side of the pivot...
 - a.do the weights on either side have to be equal? **No**
 - b.do the torques on either side have to be equal? **Yes**
9. Ice skater is spinning with arms and legs out, then pulls them in tight to their center? What happens? And Why?
Speeds up..... Skater reduced rotational inertia which means that the rotational speed must increase. Conservation of angular momentum says that this must happen.
10. Solid cylinder and hoop each of the same mass and radius roll down an incline.... Which will make it down the incline faster? Why?
Cylinder because it has a lower rotational inertia bc its mass is more concentrated toward the center
11. A helicopter's blades are rotating clockwise during a flight, if the tail rotor then breaks, what way will the body of the helicopter rotate?
Counter clockwise
12. In order to balance, the total forces on both sides of an axis of rotation need to be equal.
False
13. Why will a non rotating bike wheel topple while a spinning wheel will stay upright?
Spinning wheel has angular momentum and since its magnitude and direction needs to be conserved it will maintain its upright position. Bc of conservation of angular momentum spinning objects are much more stable and less likely to topple
14. Why does a tightrope walker carry a long stick?
In increase his rotational inertia..... this makes him resist changes in his rotational state... in other words makes him more balanced
15. Why do cats almost always land on their feet, even when they are dropped upside down?
The rotate their tails and their flexible body one way and their paws rotate the other.... This allows them to turn around while still conserving their angular momentum
16. What is "Centripetal Force"?
Center seeking force necessary for all circular motion
17. An object is being swung with a string in a horizontal circle, if the string breaks, what kind of path will the object take?
Tangent line path away from the circular path
18. A record is being spun about an axis going through its center, what point on the record has the greatest tangential speed? **Point on the edge** What point has the greatest rotational speed? **All the same**
19. When a gymnast moves from an extended position to a tucked position, does she increase or decrease her rotational inertia??
decrease

Threshold Concepts in Practice Ray Land, Jan H. F. Meyer, Michael T. Flanagan, 2016-07-09 Threshold Concepts in Practice brings together fifty researchers from sixteen countries and a wide variety of disciplines to analyse their teaching practice and the learning experiences of their students through the lens of the Threshold Concepts Framework In any discipline there are certain concepts the jewels in the curriculum whose acquisition is akin to passing through a portal Learners enter new conceptual and often affective territory Previously inaccessible ways of thinking or practising come into view without which they cannot progress and which offer a transformed internal view of subject landscape or even world view These conceptual gateways are integrative exposing the previously hidden interrelatedness of ideas and are irreversible However they frequently present troublesome knowledge and are often points at which students become stuck Difficulty in understanding may leave the learner in a liminal state of transition a betwixt and between space of knowing and not knowing where understanding can approximate to a form of mimicry Learners navigating such spaces report a sense of uncertainty ambiguity paradox anxiety even chaos The liminal space may equally be one of awe and wonderment Thresholds research identifies these spaces as key transformational points crucial to the learner's development but where they can oscillate and remain for considerable periods These spaces require not only conceptual but ontological and discursive shifts This volume the fourth in a tetralogy on Threshold Concepts discusses student experiences and the curriculum interventions of their teachers in a range of disciplines and professional practices including medicine law engineering architecture and military education Cover image Detail from Eve offering the apple to Adam in the Garden of Eden and the serpent c 1520 25 Lucas Cranach the Elder 1472 1553 Bridgeman Images All rights reserved [Survey of Science History & Concepts Parent Lesson Plan](#) ,2013-08-01 Survey of Science History Concepts Course Description Students will study four areas of science Scientific Mathematics Physics Biology and Chemistry Students will gain an appreciation for how each subject has affected our lives and for the people God revealed wisdom to as they sought to understand Creation Each content area is thoroughly explored giving students a good foundation in each discipline Semester 1 Math and Physics Numbers surround us Just try to make it through a day without using any It's impossible telephone numbers calendars volume settings shoe sizes speed limits weights street numbers microwave timers TV channels and the list goes on and on The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them It's amazing how ten simple digits can be used in an endless number of ways to benefit man The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics Physics is a branch of science that many people consider to be too complicated to understand John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend Did you know that a feather and a lump of lead will fall at the same rate in a vacuum Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances Discover
