Bykhovskii Migrations:

Passerine Migration Nikita Chernetsov, 2012-04-18 Most birds cannot cover the distance between their breeding and winter quarters in one hop They have to make multiple flights alternated with stopovers Which factors govern the birds decisions to stop to stop for how long when to resume flight What is better to accumulate much fuel and to make long flights for many hundreds of kilometres or to travel in small steps Is it necessary to find habitats similar to the breeding ones or other habitats would do Are long migratory flights indeed so costly energetically as usually assumed This monograph summarizes our current knowledge on the ecology of songbird migrants during migratory stopovers and on their behaviour

Bird Migration Eberhard Gwinner, 2012-12-06 E GWINNER The phenomenon of bird migration with its large scale dimensions has attracted the attention of naturalists for centuries Worldwide billions of birds leave their breeding grounds every autumn to migrate to areas with seasonally more favorable conditions Many of these migrants travel only over a few hundred kilometers but others cover distances equivalent to the circumference of the earth Among these long distance migrants are several billion birds that invade Africa every autumn from their West and Central Palaearctic breeding areas In the Americas and in Asia the scope of bird migration is of a similar magnitude Just as impressive as the numbers of birds are their achievements They have to cope with the enormous energetic costs of long distance flying particularly while crossing oceans and deserts that do not allow replenishment of depleted fat reserves They have to appropriately time the onset and end of migrations both on a daily and annual basis And finally they have to orient their migratory movements in space to reach their species or population specific wintering and breeding grounds irrespective of the variable climatic conditions along their migratory routes

Animal Migration, Orientation and Navigation Gauthreaux, 2012-12-02 Animal Migration Orientation and Navigation presents the various aspects of animal migration including the evolution of migration climatic and meteorological influences and bioenergetics This book discusses the physiological control sensory systems orientation and navigation and biological clocks and phenology aspects of animal migration Organized into five chapters this book begins with an overview of the migration strategies of animals in the context of a space continuum This text then explains the influence of short and long term climatic cycles on the spectrum of migratory patterns in nature Other chapters consider the energetic requirements of different migration strategies and the energy stores of the migrants This book discusses as well the physiological basis of animal migration with emphasis on endocrinal findings on the timing and energetic aspects of different migration strategies The final chapter deals with the mechanisms used in direction finding by migrating animals This book is a valuable resource for biologists and ecologists
