 William Y Chang, Hosame Abu-Amara, Jessica Feng Sanford, 2010-11-15 The broad scope of Cloud Computing is creating a
 technology business sociological and economic renaissance It delivers the promise of making services available quickly with
 rather little effort Cloud Computing allows almost anyone anywhere at anytime to interact with these service offerings Cloud
 Computing creates a unique opportunity for its users that allows anyone with an idea to have a chance to deliver it to a mass
 market base As Cloud Computing continues to evolve and penetrate different industries it is inevitable that the scope and
 definition of Cloud Computing becomes very subjective based on providers and customers perspective of applications For
 instance Information Technology IT professionals perceive a Cloud as an unlimited on demand flexible computing fabric that is
 always available to support their needs Cloud users experience Cloud services as virtual off premise applications provided by
 Cloud service providers To an end user a provider offering a set of services or applications in the Cloud can manage these off

 the Internet and collaborated servers to integrate data applications and computing resources With proper Cloud access such
 technology allows consumers and businesses to access their personal files on any computer without having to install special

tools Cloud Computing facilitates efficient operations and management of computing technologies by federating storage memory processing and bandwidth
