Computational Geometry An Introduction Texts And Monographs In Computer Science:

Computational Geometry Franco P. Preparata, Michael Ian Shamos, 1990 **Computational Geometry** Franco P. Preparata, Michael I. Shamos, 2012-12-06 From the reviews This book offers a coherent treatment at the graduate textbook level of the field that has come to be known in the last decade or so as computational geometry The book is well organized and lucidly written a timely contribution by two founders of the field It clearly demonstrates that computational geometry in the plane is now a fairly well understood branch of computer science and mathematics It also points the way to the solution of the more challenging problems in dimensions higher than two Mathematical Reviews 1 This remarkable book is a comprehensive and systematic study on research results obtained especially in the last ten years The very clear presentation concentrates on basic ideas fundamental combinatorial structures and crucial algorithmic techniques The plenty of results is cleverly organized following these guidelines and within the framework of some detailed case studies A large number of figures and examples also aid the understanding of the material Therefore it can be highly recommended as an early graduate text but it should prove also to be essential to researchers and professionals in applied fields of computer aided design computer graphics and robotics Biometrical Journal 2 *SOFSEM 2015: Theory and Practice of Computer Science* Giuseppe Italiano, Tiziana Margaria-Steffen, Jaroslav Pokorný, Jean-Jacques Quisquater, Roger Wattenhofer, 2015-01-14 This book constitutes the proceedings of the 41st International Conference on Current Trends in Theory and Practice of Computer Science held in Pec pod Sn kou Czech Republic during January 24 29 2015 The book features 8 invited talks and 42 regular papers which were carefully reviewed and selected from 101 submissions The papers are organized in topical sections named foundations of computer science software and Web engineering data information and knowledge engineering and cryptography security and verification **WALCOM: Algorithms and Computation** Sandip Das, Ryuhei Uehara, 2009-02-11 This book constitutes the refereed proceedings of the Third International Workshop on Algorithms and Computation WALCOM 2009 held in Kolkata India in February 2009 The 30 revised full papers presented together with 4 invited papers were carefully reviewed and selected from 102 submissions The papers feature original research in the areas of design and analysis of algorithms computational geometry graph drawing and graph algorithms The papers are organized in topical sections on computational geometry graph algorithms complexity graph drawing approximation algorithms and randomized algorithms Collected Works of William P. Thurston with Commentary Benson Farb, David Gabai, Steven P. Kerckhoff, 2023-06-08 William Thurston's work has had a profound influence on mathematics He connected whole mathematical subjects in entirely new ways and changed the way mathematicians think about geometry topology foliations group theory dynamical systems and the way these areas interact His emphasis on understanding and imagination in mathematical learning and thinking are integral elements of his distinctive legacy This four part collection brings together in one place Thurston's major writings many of which are appearing in publication for the first time Volumes I III contain

commentaries by the Editors Volume IV includes a preface by Steven P Kerckhoff Volume III contains William Thurston's papers on dynamics and computer science and papers written for general audiences Additional miscellaneous papers are also included such as his 1967 New College undergraduate thesis which foreshadows his later work

Computer Science -- Theory and Applications Dima Grigoriev, 2006-05-15 The International Symposium on Computer Science in Russia CSR 2006 was held on June 8-12 2006 in St Petersburg Russia hosted by the Steklov Institute of Mathematics at St Petersburg

Computational Geometry - Proceedings Of The Workshop A Conte, F Fontanella, I Galligani, V Demichelis, 1993-08-31 This volume focuses on the more recent results in computational geometry such as algorithms for computer pictures of algebraic surfaces the dimensionality paradigm and medial axis transform in geometric and solid modeling stationary and non stationary subdivision schemes for the generation of curves and surfaces minimum norm networks in CAGD knot removal and constrained knot removal for spline curves blossoming in CAGD triangulation methods geometric modeling

Combinatorial Geometry and Its Algorithmic Applications János Pach, Micha Sharir, 2009 Based on a lecture series given by the authors at a satellite meeting of the 2006 International Congress of Mathematicians and on many articles written by them and their collaborators this volume provides a comprehensive up to date survey of several core areas of combinatorial geometry It describes the beginnings of the subject going back to the nineteenth century if not to Euclid and explains why counting incidences and estimating the combinatorial complexity of various arrangements of geometric objects became the theoretical backbone of computational geometry in the 1980s and 1990s The combinatorial techniques outlined in this book have found applications in many areas of computer science from graph drawing through hidden surface removal and motion planning to frequency allocation in cellular networks *Combinatorial Geometry and Its Algorithmic Applications* is intended as a source book for professional mathematicians and computer scientists as well as for graduate students interested in combinatorics and geometry Most chapters start with an attractive simply formulated but often difficult and only partially answered mathematical question and describes the most efficient techniques developed for its solution The text includes many challenging open problems figures and an extensive bibliography **BOOK JACKET**

Directed Algebraic Topology and Concurrency Lisbeth Fajstrup, Eric Goubault, Emmanuel Haucourt, Samuel Mimram, Martin Raussen, 2016-03-02 This monograph presents an application of concepts and methods from algebraic topology to models of concurrent processes in computer science and their analysis Taking well known discrete models for concurrent processes in resource management as a point of departure the book goes on to refine combinatorial and topological models In the process it develops tools and invariants for the new discipline directed algebraic topology which is driven by fundamental research interests as well as by applications primarily in the static analysis of concurrent programs The state space of a concurrent program is described as a higher dimensional space the topology of which encodes the essential properties of the system In order to analyse all possible executions in the state space more than just the topological properties have to be considered Execution paths need

to respect a partial order given by the time flow As a result tools and concepts from topology have to be extended to take privileged directions into account The target audience for this book consists of graduate students researchers and practitioners in the field mathematicians and computer scientists alike **Algorithms and Complexity** Dimitris Fotakis, Aris Pagourtzis, Vangelis Th. Paschos, 2017-04-12 This book constitutes the refereed conference proceedings of the 10th International Conference on Algorithms and Complexity CIAC 2017 held in Athens Greece in May 2017 The 36 revised full papers were carefully reviewed and selected from 90 submissions and are presented together with 3 abstracts of invited talks and a paper to the 70th birthday of Stathis Zachos The papers present original research in the theory and applications of algorithms and computational complexity
