Optimization for Decision Making Katta G. Murty,2010-03-14 Linear programming LP modeling and optimization are very much the fundamentals of OR and no academic program is complete without them No matter how highly developed one s LP skills are however if a fine appreciation for modeling isn t developed to make the best use of those skills then the truly best solutions are often not realized and efforts go wasted Katta Murty studied LP with George Dantzig the father of linear programming and has written the graduate level solution to that problem While maintaining the rigorous LP instruction required Murty s new book is unique in his focus on developing modeling skills to support valid decision making for complex real world problems He describes the approach as intelligent modeling and decision making to emphasize the importance of employing the best expression of actual problems and then applying the most computationally effective and efficient solution technique for that model

Discrete and Computational Geometry Jacob E. Goodman,Richard D. Pollack,William L. Steiger,1991-01-01 The first DIMACS special year held during

1989 1990 was devoted to discrete and computational geometry More than 200 scientists both long and short term visitors came to DIMACS to participate in the special year activities Among the highlights were six workshops at Rutgers and Princeton Universities that defined the focus for much of the special year The workshops addressed the following topics geometric complexity probabilistic methods in discrete and computational geometry polytopes and convex sets arrangements and algebraic and practical issues in geometric computation This volume presents some of the results growing out of the workshops and the special year activities Containing both survey articles and research papers this collection presents an excellent overview of significant recent progress in discrete and computational geometry The diversity of these papers demonstrate how geometry continues to provide a vital source of ideas in theoretical computer science and discrete mathematics as well as fertile ground for interaction and simulation between the two disciplines **Computing in**
