## **Conformal Field Theory Graduate Texts In Contemporary Physics:**

*Conformal Field Theory* Philippe Francesco, Pierre Mathieu, David Senechal, 2012-12-06 Filling an important gap in the literature this comprehensive text develops conformal field theory from first principles The treatment is self contained pedagogical and exhaustive and includes a great deal of background material on quantum field theory statistical mechanics Lie algebras and affine Lie algebras The many exercises with a wide spectrum of difficulty and subjects complement and in many cases extend the text The text is thus not only an excellent tool for classroom teaching but also for individual study Intended primarily for graduate students and researchers in theoretical high energy physics mathematical physics condensed matter theory statistical physics the book will also be of interest in other areas of theoretical physics and mathematics It will prepare the reader for original research in this very active field of theoretical and mathematical physics

**Handbook of Quantum Gravity** Cosimo Bambi,Leonardo Modesto,Ilya Shapiro,2024-12-03 The search for a theory of quantum gravity is one of the most important and fascinating problems in modern theoretical physics While we do not have yet a complete theory of quantum gravity significant advancements have been done in the past decades In this handbook every section is dedicated to a specific approach towards a theory of quantum gravity and is edited by the leading experts in the field This book represents both a valuable resource for graduate students and an important reference for researchers in quantum gravity

**Laser Cooling and Trapping** Harold J. Metcalf,Peter van der Straten,2012-12-06 Laser cooling is a relatively new technique that has led to insights into the behavior of atoms as well as confirming with striking detail some of the fundamental notions of quantum mechanics such as the condensation predicted by S N Bose This elegant technique whereby atoms molecules and even microscopic beads of glass are trapped in small regions of free space by beams of light and subsequently moved at will using other beams provides a useful research tool for the study of individual atoms and clusters of atoms for investigating the details of chemical reactions and even for determining the physical properties of individual macromolecules such as synthetic polymers and DNA Intended for advanced undergraduates and beginning graduate students who have some basic knowledge of optics and quantum mechanics this text begins with a review of the relevant results of quantum mechanics it then turns to the electromagnetic interactions involved in slowing and trapping atoms and ions in both magnetic and optical traps The concluding chapters discuss a broad range of applications from atomic clocks and studies of collision processes to diffraction and interference of atomic beams at optical lattices and Bose Einstein condensation

**Mathematical Aspects of Quantization** Sam Evens,2012 This book is a collection of expository articles from the Center of Mathematics at Notre Dame

s 2011 program on quantization Included are lecture notes from a summer school on quantization on topics such as the Cherednik algebra geometric quantization detailed proofs of Willwacher s results on the Kontsevich graph complex and group valued moment maps This book also includes expository articles on quantization and automorphic forms renormalization Berezin Toeplitz quantization in the complex setting and the commutation of quantization with reduction as well as an original article on derived Poisson brackets The primary goal of this volume is to make topics in quantization more accessible to graduate students and researchers
