Reinterpretation of the Philosophy of Mathematics presents some of the most important positions in the philosophy of
mathematics while adding new dimensions to this philosophy Mathematics is an integral part of human and social life
meaning that a philosophy of mathematics must include several dimensions This book describes these dimensions by the
following four questions that structure the content of the book Where is mathematics How certain is mathematics How social
is mathematics How good is mathematics These four questions refer to the ontological epistemological social and ethical
dimension of a philosophy of mathematics While the ontological and epistemological dimensions have been explored in all
classic studies in the philosophy of mathematics the exploration of the book is unique in its social and ethical dimensions It
argues that the foundation of mathematics is deeply connected to human and social actions and that mathematics includes
not just descriptive but also performative features This human centered and accessible interpretation of mathematics is
relevant for students in mathematics mathematics education and any technical discipline and for anybody working with
