Geotechnical Slope Analysis Robin Chowdhury, Gautam Bhattacharya, Subhadeep Metya, 2023-11-30 This second edition of Geotechnical Slope Analysis is an updated version of the original scholarly book In this edition concepts and applications have been thoroughly revised In particular the Initial Stress Approach has been extended to 2D problems in a more rigorous manner Additional solved numerical examples have been added in several chapters More importantly the meaning of the results is explored through interpretation The influence of initial stresses pore water pressures and seismic forces has been explored not only on performance indicators such as the Factor of Safety but also on the location of critical slip surfaces In addition to these factors it is shown that the chosen method of analysis may also have a significant influence on the location of the critical slip surface Student exercises have been included in some chapters with a view to encouraging further study and research and reference is often made to case studies of particular importance The best features of the book have been retained with continued emphasis on both deterministic and probabilistic approaches for quantifying slope performance The traditional performance indicator such as Factor of Safety can be complemented by the calculation of the Reliability Index and the Probability of Failure This book focuses on research studies concerning slope behaviour the occurrence of landslides and the use of alternative methods of analysis and interpretation The importance of uncertainties in slope performance and more broadly in geotechnical engineering is emphasised This book will be valuable to undergraduate and senior students of civil mining and geological engineering as well as to academic teachers and instructors and also to researchers practising geotechnical engineers and consultants

Building Habitats on the Moon Haym Benaroya, 2018-01-11 Designing a habitat for the lunar surface You will need to know more than structural engineering There are the effects of meteoroids radiation and low gravity Then there are the psychological and psychosocial aspects of living in close quarters in a dangerous environment far away from home All these must be considered when the habitat is sized materials specified and structure designed This book provides an overview of various concepts for lunar habitats and structural designs and characterizes the lunar environment the technical and the nontechnical The designs take into consideration psychological comfort structural strength against seismic and thermal activity as well as internal pressurization and 1/6 g Also discussed are micrometeoroid modeling risk and redundancy as well as probability and reliability with an introduction to analytical tools that can be useful
