Creating Life in the Lab Fazale Rana, 2011-02-01 Each year brings to light new scientific discoveries that have the power to either test our faith or strengthen it most recently the news that scientists have created artificial life forms in the laboratory If humans can create life what does that mean for the creation story found in Scripture Biochemist and Christian apologist Fazale Rana for one isn't worried In Creating Life in the Lab he details the fascinating quest for synthetic life and argues convincingly that when scientists succeed in creating life in the lab they will unwittingly undermine the evolutionary explanation for the origin of life demonstrating instead that undirected chemical processes cannot produce a living entity

shows how the impacts ripple far and wide from economic stagnation in rural communities to famines overseas and argues that solving this crisis will require a complete structural shift a change that is about politics not just personal choice

Can Science Make Sense of Life? Sheila Jasanoff, 2019-03-05 Since the discovery of the structure of DNA and the birth of the genetic age a powerful vocabulary has emerged to express science's growing command over the matter of life Armed with knowledge of the code that governs all living things biology and biotechnology are poised to edit even rewrite the texts of life to correct nature's mistakes Yet how far should the capacity to manipulate what life is at the molecular level authorize science to define what life is for This book looks at flash points in law politics ethics and culture to argue that science's promises of perfectibility have gone too far Science may have editorial control over the material elements of life but it does not supersede the languages of sense making that have helped define human values across millennia the meanings of autonomy integrity and privacy the bonds of kinship family and society and the place of humans in
